1 Abbreviations, definitions, symbols and pictograms

	Risk of injury! Connect electric circuit points only by authorized electrician.		Electrostatic stroke! Ground!
	Noise > 85dB(A) Wear ear protection!		Explosion hazard caused by dust! Ground!
	Explosion hazard! Connect only max. admitted pressure.		Risk of injury! Discharge pressure completely during maintenance jobs.

2 General information

2.1 Technical documents

The technical documents are part of the machine and contains important manufacturer information. The technical documentation is intended for everyone who uses the cabinet.

These operating instructions provide important information on handling the device. The precondition for safe working is compliance with all specified safety instructions and handling instructions. In addition, the local accident prevention regulations applicable to the area in which the device is used and the general safety regulations must be followed. Read the operating instructions carefully before starting any work! It is part of the product and must be kept in the immediate vicinity of the device and be accessible to staff at all times. These technical documents must be made available to all persons who use the blasting cabinet under their own responsibility. Those responsible for the plant and operation must ensure that the documentation has been read and understood completely. On the basis of this documentation and taking into account the industrial safety regulation, appropriate maintenance and test plans as well as operating instructions for the operating and maintenance personnel must be derived.

	NOTE! The illustrations in these instructions are for basic understanding and may differ from the actual design of the device.
---	--

2.2 Other applicable documents

The following operating instructions must also be noted:

Operating instructions single-chamber pressure blasting devices with manual metering valve, pilot pressure regulator, TLR outlet valve and water separator

Operating instructions pressure cyclone

3 Product description

3.1 Conventional utilization and restrictions

	PULSAR III	PULSAR VI	PULSAR VIII	PULSAR VI+	PULSAR VIII+
Max. carrying capacitance steel grating	1000 N	1000 N	1000 N	1000 N	1000 N
Max. carrying capacitance with wrack	2000 N	2000 N	2000 N	2000 N	2000 N
Operating time	< 4h / day			Continuous operation	
Basic parameters	See Section "0.5 – Applications and restrictions" – "Parameters" from the yellow cover of this manual				

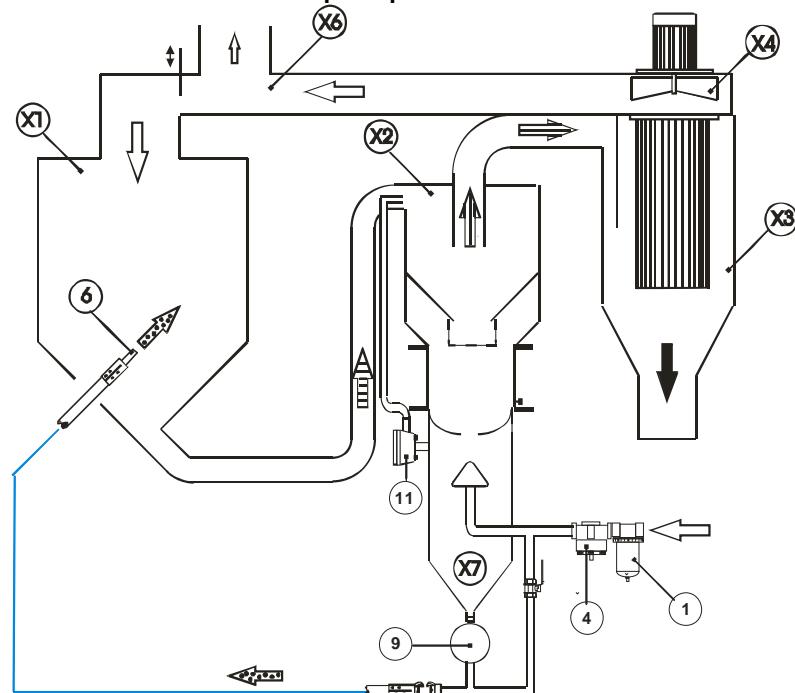

3.2 No conventional utilisation – Warnings for misuse

Prohibited:

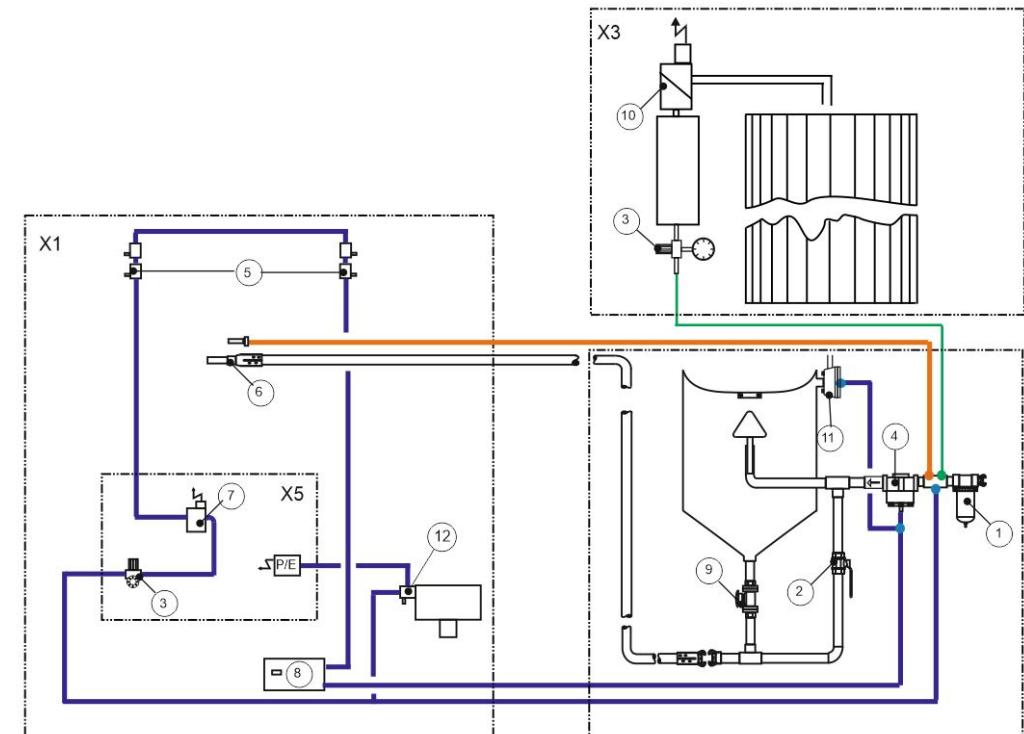

- Operating in an explosive atmosphere
- Not to be used for case 3 from the exploded view drawing (see yellow cover, section 06), apart from the following exceptions:
 - o only permitted if the risk of explosion can be adequately restricted by implementing special measures and proof of this is provided
 - o this proof must be provided in writing as part of a case-by-case assessment
- Not to be used as a blast cleaning cabinet that relies on explosive solvents and/or solvents that are hazardous to health
- Not to be used for blasting parts that could release substances:
 - o that pose a risk of explosion
 - o that cannot be sufficiently restrained by the filter
 - o that could be hazardous to health in the event of a filter defect

3.3 Operating mode of the complete system

Abrasiv circuit flow - Basic principle

Pneumatic flow scheme - colours of pneumatic hoses are not binding

	Pure air	8	Foot pedal 3/2-way solenoid valve
	Abrasiv, dust and air	9	Manual abrasive metering valve
	Abrasive and air	10	Diaphragm valve /cleaning
	Dust and air	11	Outlet valve
	Dust	12	3-way solenoid valve
1	Moisture separator, dust collector	X1	Blast cabinet
2	Ball valve	X2	Reclaimer
3	Pilot regulator	X3	Cartridge dust collector
4	Pressure regulator auch Einlaßventil	X4	Exhaust muffler
5	Pneumatic door interlock - 3/2-way solenoid valve	X5	E-box
6	Nozzle	X6	Connection channel between fan and blast cabinet *1)
7	3-way solenoid valve	X7	Blast machine

3.4 Description

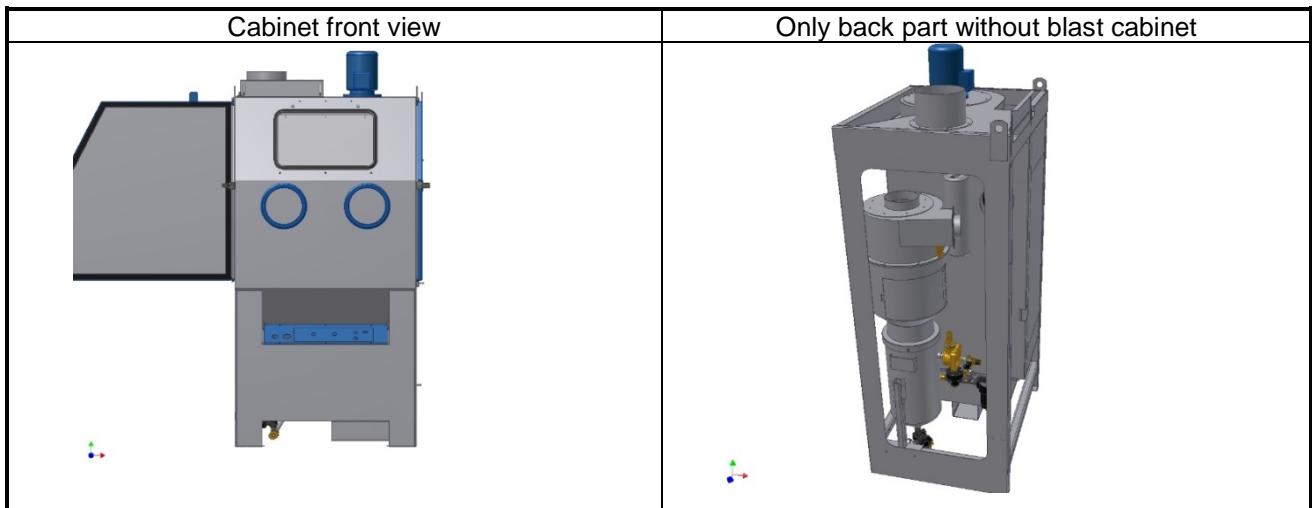

Figure 1: Pulsar III & VI pressure blast cabinet

3.4.1 Media-recovery system (Reclaimer)

- Cyclon principle
- Compartmentation of:
 - o Dust in dust collector
 - o Good media in circuit
 - o Coarse impurities in screen

3.4.2 Blast machine

- Volume:
 - o Pulsar III : 20 l
 - o Pulsar VI, VI +, VIII, VIII+ : 40 l
- Media metering valve: manual
- Controlled over foot pedal

3.4.3 Dust collector cartridge

- ⇒ automatically dedusting trough air pulse with backlash
- ⇒ Pulse interval : ca. 40..60 s
- ⇒ Pulse duration : ca. 500 ms
- ⇒ Backlash: ca. 5min
- ⇒ exchangeable cartridge
- ⇒ Dust container

3.4.4 Operating elements

	where	notes /funciones
Pressure regulation blasting	Control box	2 to 7 bar
Dedusting filter cartridge	Pressure regulator on air balance vessel – Backside of blast cabinet	Preference pressure: 5 bar
ON/OFF	Electric panel	Activating: -Control circuit -Fan -Light -Filter cartridge dedusting function (OFF does not deactivate the follow-up cleaning)
Emergency STOP	Electric panel	- Interrupts power supply and filter follow-up cleaning
Pneumatic dust container contact	Dust container	- Interrupts power supply and filter follow-up cleaning

3.5 Air consumption

See yellow cover.

3.6 Energy consumption

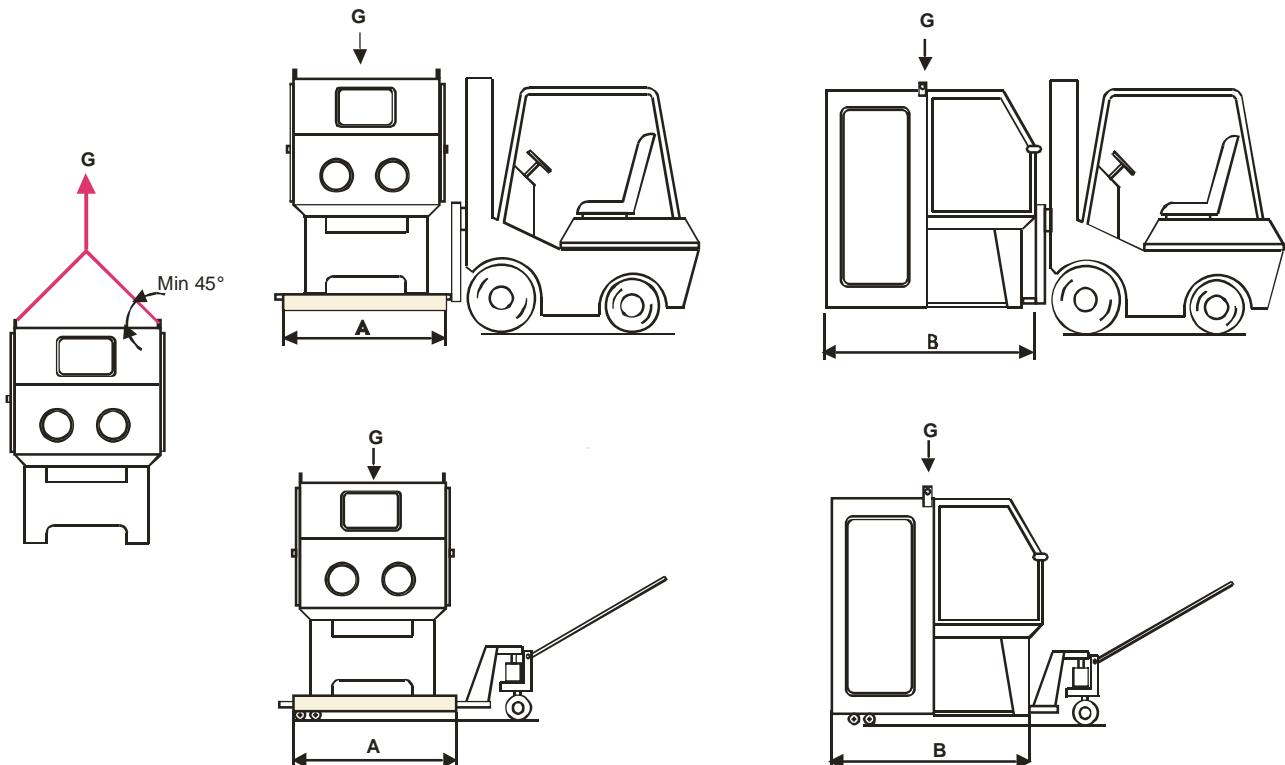

Electrical connection: see identification plate on machine.

3.7 Emissions

See yellow cover.

4 Set-up for initial installation

4.1 Carriage / Handling of cargo

	Weight		A (mm)	B(mm)
Pulsar III Pressure	4000 N	(400 kg)	1100	1700
Pulsar VI Pressure	4600 N	(460 kg)	1450	1900
Pulsar VI+ Pressure	4800 N	(480 kg)	1450	1900
Pulsar VIII Pressure	4800 N	(480 kg)	1450	2200
Pulsar VIII+ Pres- sure	5000 N	(500 kg)	1450	2200

4.2 Unpacking and disposing the packing material

- Pallet: wooden pallets – no special measures required
- Plastic film: plastic waste

4.3 Requirements for installing a cabinet

4.3.1 Requirements

Basic allowance: see yellow cover.

4.3.2 Required space

Dimensions ($\pm 10\text{mm}$)	Model				
	PULSAR III	PULSAR VI	PULSAR VI+	PULSAR VIII	PULSAR VIII+
a	2010	2090	2090	2090	2090
c	1640	1855	1970	2115	2230
d during blasting	2490	2705	2820	2965	3080
d during repairing	3040	3255	3370	3515	3630
e	2200	2570	2570	2570	2570
f	3050	3520	3520	3520	3520

Table 1: Dimensions

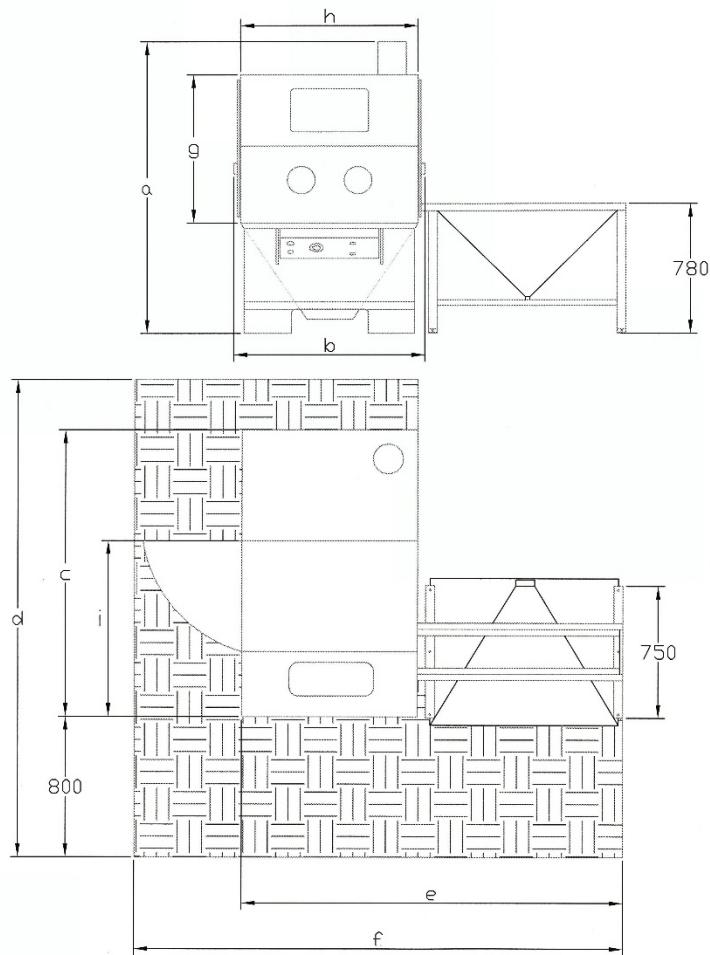

Figure 2: Required space for cabinet

4.4 Set-up, assembling and operation checkout

<i>Cabinet set up.</i>	<ul style="list-style-type: none"> - Requirements: see yellow cover - Anchoring to the floor: not required 		
		Warning!	Explosion hazard! Connect only max. admitted pressure!
<i>Air supply</i>	<p>If pressure is >7 bar, install an additional pressure regulator and safety valve between the cabinet and compressed air supply.</p> <p>Connect air line between supply and cabinet.</p> <ul style="list-style-type: none"> - Min. internal diameter: 19mm; max. length: 10m 		
<i>Filter cartridge cleaning</i>	<p>Adjust pressure regulator to 5 bar for cleaning</p>		
		Warning!	Risk of injury! Only allow approved specialists to establish the electrical connections.
		Warning!	Explosion hazard caused by dust! Ground!
		Caution!	Electrostatic shocks! Ground!
<i>Electrical connection and grounding</i>	<ul style="list-style-type: none"> - 16A Europlug connection - Ground cabinet <ul style="list-style-type: none"> - min. 10 mm² - Earthing screw provided, earthing cable included on backside of cabinet - Special nut on filter door to ensure proper grounding 		
<i>Operation checkout without media</i>	<p>Close the doors.</p> <p>Switch on the electrics (green button). Check the following:</p> <ul style="list-style-type: none"> - Lighting on? - Does the fan motor start? Motor rotating in direction of arrow? If necessary, reverse the polarity. - Cleaning pulse for filter active? (Interval: approx. 40s) - Take the nozzle in your hand and step on the foot pedal. Does the blast process start? - Step on the foot pedal and open the door on the left or right (with assistance from a 2nd person). Does the blast process stop? - Dust container monitoring: Release the dust bucket clamp – Does filter cleaning stop along with the motor in the same way as for an emergency stop? <p>Test cabinet with media, if no irregularities can be detected. Otherwise remedy errors. Therefore see section 6.</p>		
<i>Media loading</i>	<ul style="list-style-type: none"> -Slowly pour blast media into the funnel while the fan is running. - Fill quantities for initial filling: <ul style="list-style-type: none"> + Pulsar III: 10l +Pulsar VI, VI+ and VIII : 20 l 		

	 Caution	Caution! Noise > 80 dB (A) Wear ear protectors!
<i>Operation checkout with media</i>	--Close the doors. -Set blasting pressure. -Grask firmly nozzle and hold it in direction grate. Point the gun towards the perforated plate. Press down the foot pedal □ The blast process begins. -Check if dust passes of (with assistance from a 2-nd person) The following points are critical: - Doors - Suction hose connections - Connections between dust collector and dust container. You can only tell whether the machine is leak-proof during cleaning down.	

5 Instruction handbook

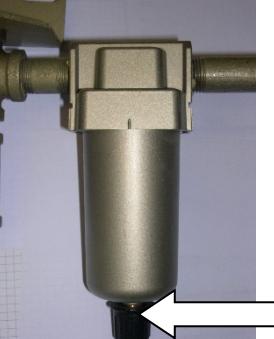

5.1 Set up and operation, shut down

1	<i>Open air supply</i>	
2	<i>Adjust blasting pressure</i>	
3	<i>Switch on electrics</i>	Press green "ON" button
4	<i>Place parts inside cabinet</i>	Close doors
5	<i>Blasting</i>	Grask firmly blast gun/nozzle and press down foot pedal
6	<i>Removal of dust</i>	From parts with blow-off gun
7	<i>Switch off electrics</i>	Press red "OFF" button Follow-up cleaning continues running for approx. 5min
8	<i>Close air supply</i>	

5.2 Emergency STOP function

<i>Push EMERGENCY STOP button</i>	-Interrupts power supply and filter cleaning function (follow-up cleaning)	
<i>Valve contact on dust container inactive</i>	- Interrupts power supply and filter cleaning function (follow-up cleaning)	
<i>Close the external compressed air supply</i>		Evacuate air via moisture separator adjusting screw.

5.3 Shutdown by longer interruption of work or moving the cabinet

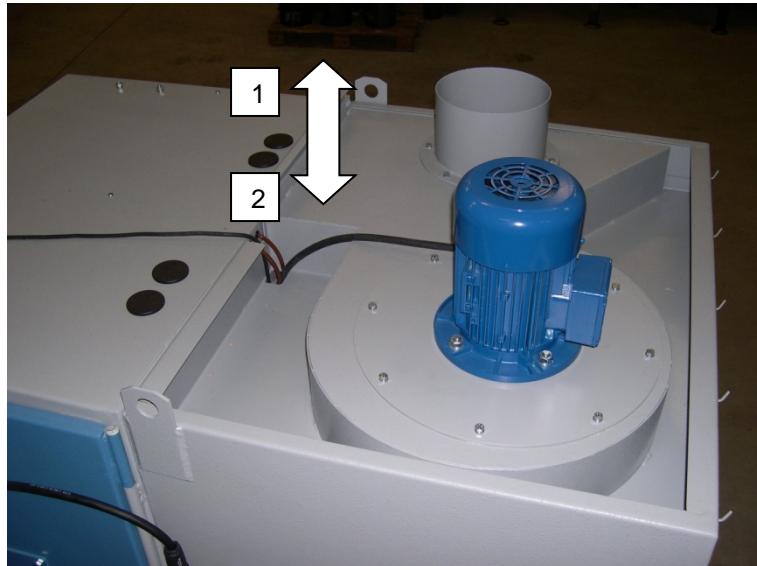

<i>Remove blast media</i>	see 5.4.3.
<i>Disconnect electrics</i>	to be completed by an approved specialist only
<i>Close the external compressed air supply</i>	 <p>Evacuate air via moisture separator adjusting screw.</p>

5.4 Special procedures

5.4.1 Adjust media / air mixture

	<ul style="list-style-type: none"> -Close media metering valve on the blast machine (direction 1) - Open step by step; jet ist ok when the blast media comes out the nozzle as a light mist.
--	--

5.4.2 Negative pressure, view, media consumption and conveyance

Damper	Negative pressure	View	Media exhausting / Consumption	Media suction
1	lower	better	higher	better
2	higher	worser	lower	worser

5.4.3 Media unloading

Turn on exhauster	Green push button
Unloading the blast pot	<ul style="list-style-type: none"> - Close choke valve on the blast pot - fully open media metering valve - Blasting pressure: should be reduced to low pressure - unscrew nozzle and nozzle holder - put a container such as a bucket on the cabinet grating - hold hose into the container - press foot pedal → direct media flow into the container
Clearing cabinet	<ul style="list-style-type: none"> -closed doors -exhauster is working -with blow off nozzle
Unloading the reclaimer	<ul style="list-style-type: none"> -push emergency stop switch -open door and remove media into the hopper -place a bucket under the hopper -open ball valve
Unloading blast pot again	-only residues

5.4.4 Pulsing (cleaning) dust collector cartridge / replace cartridge / disposal of residues

Replace cartridge	<ul style="list-style-type: none"> - Clean the filter cartridges once or twice (pulse) - Switch off cabinet (red button) - Close air supply - depressurize the system - Unscrew dust collector cover - Slide a plastic bag ($\geq 120\text{ l}$) over the filter cartridge - Undo nuts on flange and remove cartridge together with the plastic bag - Screw in new cartridge, making sure that seal is seated correctly - Lock filter cover in place
Empty dust container	<ul style="list-style-type: none"> - Open dust bin, close plastic bag (inside dust bin) and remove it - Set up new plastic bag into the dust bin - Release the dust container from the cover. <p>WARNING! If toxic residues, dispose dust as hazardous waste!</p>

5.4.5 Window replacement

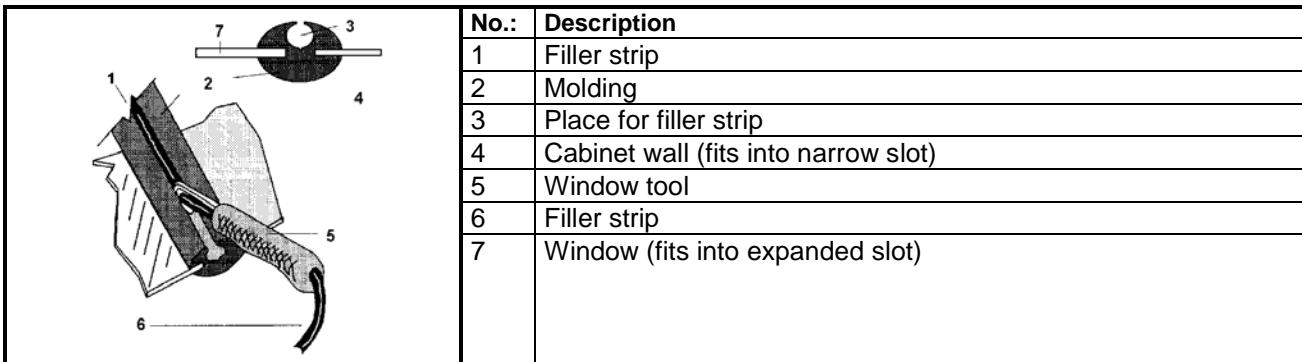

Figure 4: Thread filler strip

Pull filler strip from the window molding	
Remove window	Push the window from the cabinet inside
Install a new window molding	Strip channel facing the front of the cabinet
Install window	Push into the slot
Thread filler strip	With installation tool

5.4.6 Adjust door safety interlock

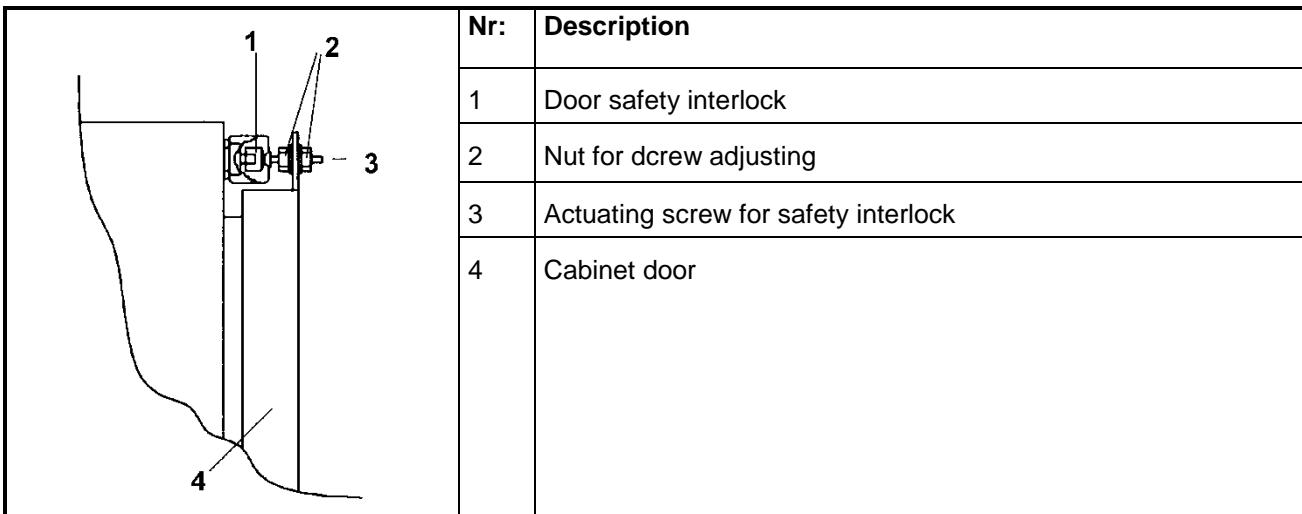

Figure 5: Door safety interlock connection

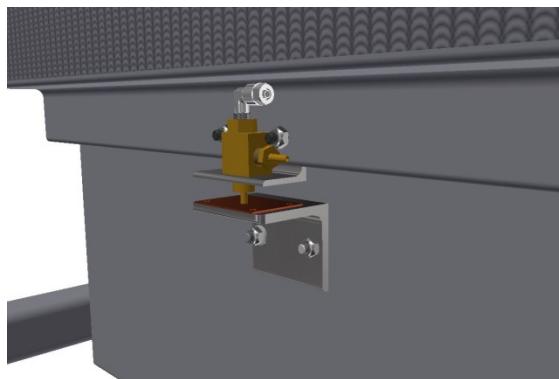

6 Maintenance and cleanse

6.1 Preface

During operation the cabinets are exposed to wear. Regular maintenance is the only way to ensure high levels of safety and efficiency.

6.2 Dust container

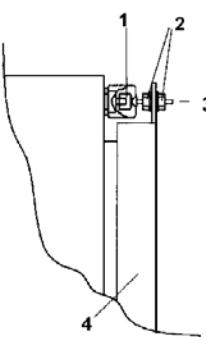

Check	Replace/clean if necessary
Pneumatic dust container contact	<ul style="list-style-type: none"> - Open fastener - Press pin, which should spring back of its own accord
Empty dust container regularly	<ul style="list-style-type: none"> - May be necessary after just 1h – but never leave it longer than 4h

6.3 If required

Check	Replace/clean if necessary
View window	<ul style="list-style-type: none"> - Cover lenses - If necessary window glass – see 5.4.5
Gloves	<ul style="list-style-type: none"> - Replace if damaged

6.4 After max. 8 h of blasting

Check	Replace/clean if necessary
Door interlock	<ul style="list-style-type: none"> - Open doors - Press pin (1). It must return from alone. 
Media recovery system (cyclone)	<ul style="list-style-type: none"> - Empty screen → Turn off exhauster. This may be necessary more often. - Clean any residues off the solenoid in the screen - Check that the swirl brake in the screen is seated securely
Nozzle and nozzle holder	<ul style="list-style-type: none"> - Check the nozzle gasket for wear, if necessary exchange

6.5 After max. 50h of blasting

Check	Replace / clean if necessary
(1) Blast gun and nozzle	Nozzle gasket
(2) Moisture separator	Always use a mild detergent for cleaning (e.g. soapsuds)
(3) Air- and blast hoses	- Hose couplings and gaskets - Blast hoses (with a squeeze of the hand)
(4) Blast pot	-Check O-ring for wear by hand -Check pop up valve for wear by hand

6.6 After max. 150h of blasting

Check	Replace/clean if necessary
(1) Gasket on cabinet doors	Clean and, if necessary replace
(2) Filter cartridge	- See Section 5.4.4

6.7 After other periods of time

Replace (even without wear)	After maximal:
Blast hoses	6 years
Remote control hoses	6 years
Air hoses – external air supply	6 years
O-rings	5 years
Pop up valve (blast pot)	5 years
Gaskets	5 years

7 Troubleshooting

Problem	Probable cause	Remedy
(1) Cabinet does not work	Dust container is not fixed in position	Check fixing (maybe do adjustments)
	Valve on dust container is defective or has not been adjusted correctly	Check and replace if necessary
	No air pressure	Check all connections
	Emergency stop switch activated	deactivate
(2) Poor visibility.	Fan motor does not work	
	Damper slides in wrong position	See 5.4.1
	Filter cartridge is dirty	Blow off filter cartridge Replace it (see 5.4.4)
	Fan motor is rotating backwards	Get an approved specialist to reverse the polarity
	Blast media breaks down rapidly and develops dust	- Reduce blast pressure - Use another type of blast media
	Hose between cabinet and cyclone is blocked	Check the hose and, if necessary, detach it. Remove the dust and blast media. Blockage is not the real cause.
	Air leakage in the suction cycle	Check the following components: - Cyclone door is open or leaky - Check the connections of hose for leaks - Check suction hoses for wear - Check if dust container is sealed proper

(3) Abnormally high media consumption.	Cyclone door is open or leaky	Replace gasket
	Blast media is too fine or too light	Install and adjust a supplementary Vortex tube
	Negative pressure too high	See 5.4.2
(4) Poor cleaning rate	Not enough blast media in circuit.	Check and if necessary refill.
	Media metering valve is adjusted incorrect	A new adjustment is necessary (see 5.4.1).
	Reduced air-pressure	<ul style="list-style-type: none"> - Check air supply - If the static pressure decreases during blasting, the following components should be checked : <ul style="list-style-type: none"> + moisture separator + pressure regulator + nozzle
	Blocked blast hose or gun / nozzle	<ul style="list-style-type: none"> - Push nozzle against an elastical object (for example rubber plate) and step on the foot pedal. - Disassembly hose or gun and cleanse. - Search after the cause of blockage: <ul style="list-style-type: none"> ⇒ Missing or overfilled screen in the reclaimer. ⇒ Incorrectly adjusted metering valve. ⇒ Too heavy blast media.
	Worn nozzle	-Replace nozzle
	Moist blast media	<ul style="list-style-type: none"> - Frequent bridging or blockage in the mdeia metering valve can be caused by moist blast media. Following reasons could be possible: <ul style="list-style-type: none"> ⇒ Media was filled moist → remove ⇒ Humidity from air supply → interconnect humidifier ⇒ Perspiration water through sharp drop in room temperaturer → Make sure, that there is not too much temperature fluctuation
(5) Dust comes out the blower	Dust filter gasket defective.	-Replace gasket -see 5.4.4
	Defective cartridge.	- replace cartridge -see 5.4.4
(6) Static shocks		<ul style="list-style-type: none"> - improve grounding of the cabinet. - in exceptional cases use supplementary ground wire between blast gun and cabinet wall
(7) No air and no media comes out the nozzle	Door interlocks are not actuated	Adjust pin resp. door fixing bzw. see 5.4.6
	Polluted (blocked) moisture separator.	Cleanse moisture separator
(8) Air only (no media) comes out the nozzle	No blast media in the blast circuit	refill
	Moist media	<ul style="list-style-type: none"> -Remove moist media. -Remove cause for humid air supply.
	Wrong connection of pneumatic hoses on foot pedal → permanent air blow off	<ul style="list-style-type: none"> - only when foot pedal was new installed - connect properly
	Hose of control lines leaky	- need of second person

		- First person „is blasting“, second person checks leakages on controls lines.
		Caution! Risk of injury! Discharge completely pressure during maintenance jobs.
(9) No interruption of blast process when foot pedal is released	Foot pedal valve blocked.	- Bleed installation (see 5.2 / 5.3) - Replace foot pedal valve
(10) Irregular flow or too much blast media comes out the nozzle	Incorrect adjusted media flow.	Adjust new (see 5.4.1).
(11) Media remains in the suction hose	Incorrect adjusted negative pressure Media too heavy	See 5.4.2 Use other media

8 Admitted modifications for users

Only with the approval of the producer! Otherwise the installation will lose guarantee and CE-certification.

9 Replacement parts

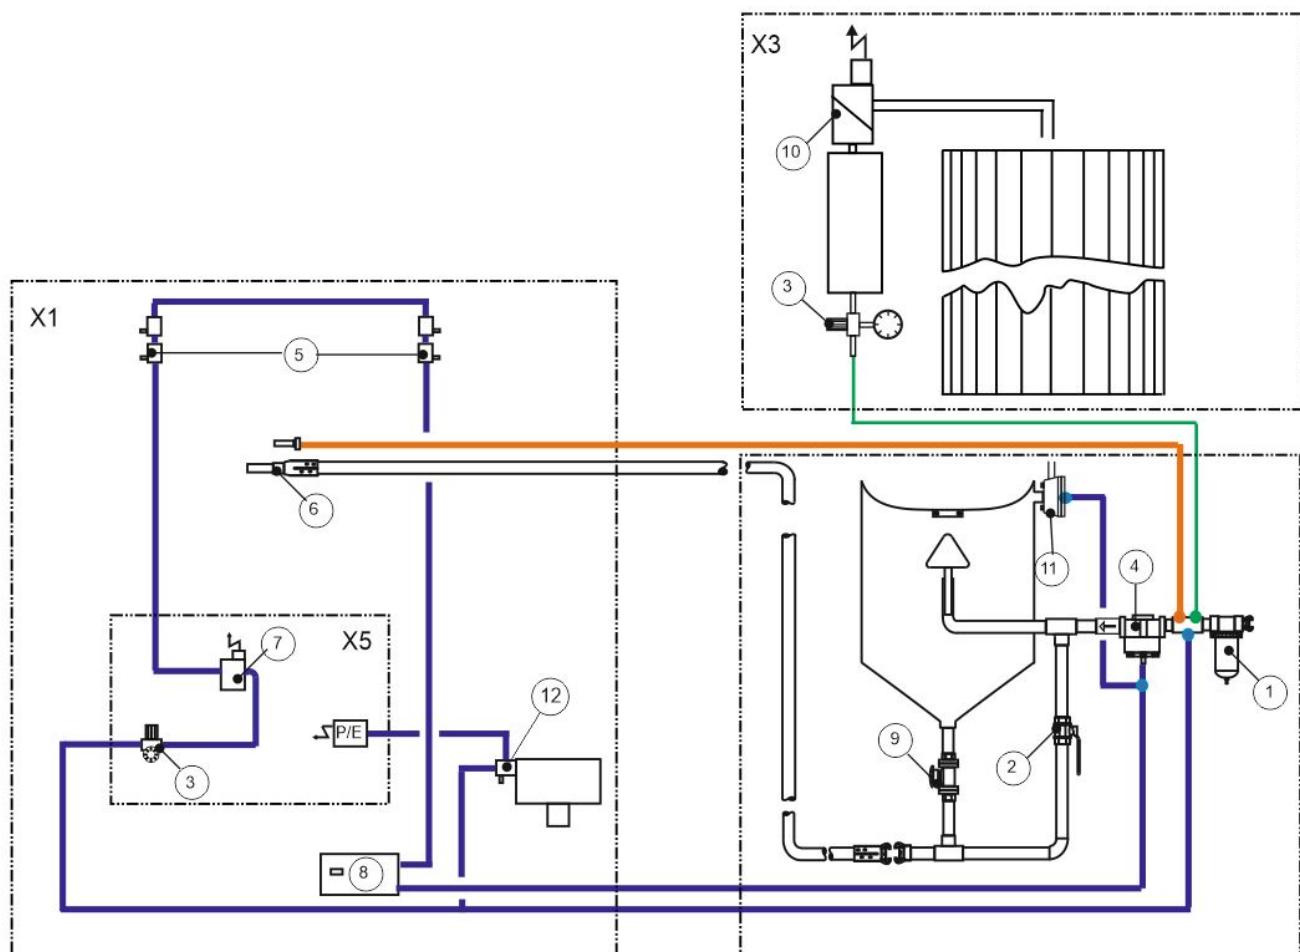

9.1 Cabinet assembly

Pos.	description	Pulsar III	Pulsar VI & VI +	Pulsar VIII&VIII+

9.4 40 I Blast pot for Pulsar VI, VI+, VIII, VIII+ - part no.: 99427Z

Pos.	Part no.:	Description
1	99982A	Blast pot SC-1628 ZV SOFT only (40l)
-	02321D	P-2 Pop-up valve with shaft
-	99157D	O-Ring P-5 with quarterlip
2	02323D	Inspection door ASSY
3	91011D	CFT iron cast coupling 1 1/4“
-	90550D	P-8-R Y pice 1 ¼“
-	90551D	P31 nipple 11/4“x100mm rubber lined
	94284D	KAG 54 Air coupling 1 ¼“ M
	01809D	Red. bushing 1 1/4“-1/2“
4	24376D	MP 1/2" media metering valve
	27351D	Pipe 1/2“ x 70mm
5	94216D	KIG air coupling 1 1/4"
6	90545D	HMS Water separator 1 ½“
7	02397D	Ball valve 1 ¼“ with handle
8	10711Z	Pilot regulator 1 ½“
9	99633D	Non return valve 1 ¼“ with rubber ball
10	90460D	Elbow union 1 ¼"
11	03371D	Outlet valve TLR
-	01804D	Red. nipple 1 ¼“ – 1“ I Nr. 245
12	94301D	Hose nipple 1 x 25mm

9.5 Nozzles, Blast hose, Couplings, etc

Pos.	Description	Pulsar III	Pulsar VI&VI +	Pulsar VIII&VIII+
(1)	CFB-0 –Brass coupling 1 ¼“ (pot)	90257D		
	CFT –Iron cast coupling 1 ¼“ (pot)	-	91011D	91011D
(2)	CQB-0 –Brass coupling for 13 x 7,5	90258D		
	CQP ¾“ Plastic coupling for 19x7	-	94350D	94350D
(3)	Blast hose 13 x 7,5 pro m	04257D	-	-
	Blast hose 19 x 7 pro m	-	04301D	04301D
(4)	NHP-0 nozzle holder f. blast hose 13x7,5	90269D	-	-
	NHP-3/4“ nozzle holder f. blast hose 19x7		99204D	99204D
(5)	Nozzles with fine thread 25 mm			
	CB-2/25 Boron carbide nozzle (3 mm)	94210D	-	-
	CB-3/25 Boron carbide nozzle (4,5 mm)	94211D	-	-
	CB-4/25 Boron carbide nozzle (6 mm) Standard	94212D	-	-
	CB-5/25 Boron carbide nozzle (8 mm)	94212D	-	-
	Nozzles with coarse thread 50 mm			
	CTJG-3 Clemlast TC 8mm	-	05288D	05288D
	CTJG-4 Clemlast TC 8mm	-	05289D	05289D
	CTJG-5 Clemlast TC 8mm Standard	-	05290D	05290D
(-)	Nozzle holder	100559	100559	100559
(-)	Clamp ZERO 12mm	99868Z	99868Z	99868Z
(-)				

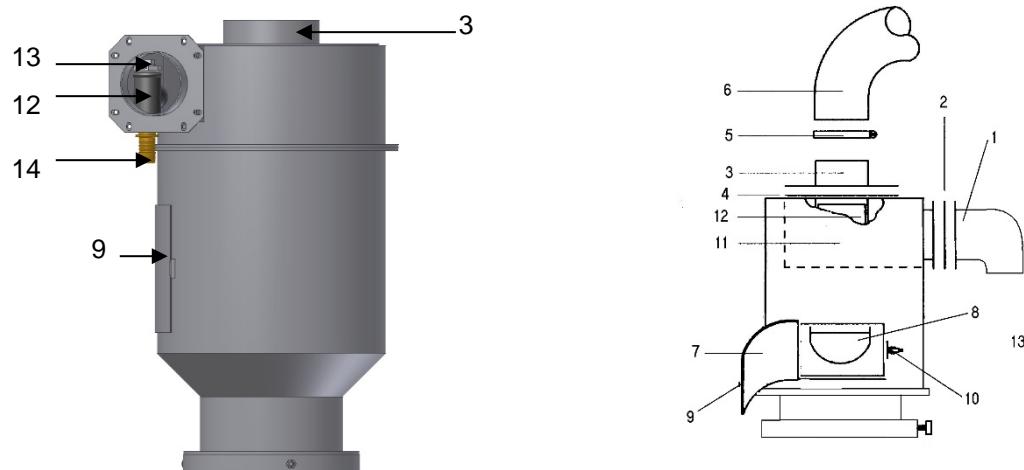

9.6 Foot pedal

Pos.	Description	Pulsar III	Pulsar VI a.VI +	Pulsar VIII a.VIII+
(-)	3-way foot valve only	06266A	06266A	06266A
(-)	3-way foot valve complete	06266Z	06266Z	06266Z
(-)	Silencer 1/4"	90941D	90941D	90941D
(-)	Pipe plug 1/4"	01950D	01950D	01950D

9.7 Cyclon

Picture :6

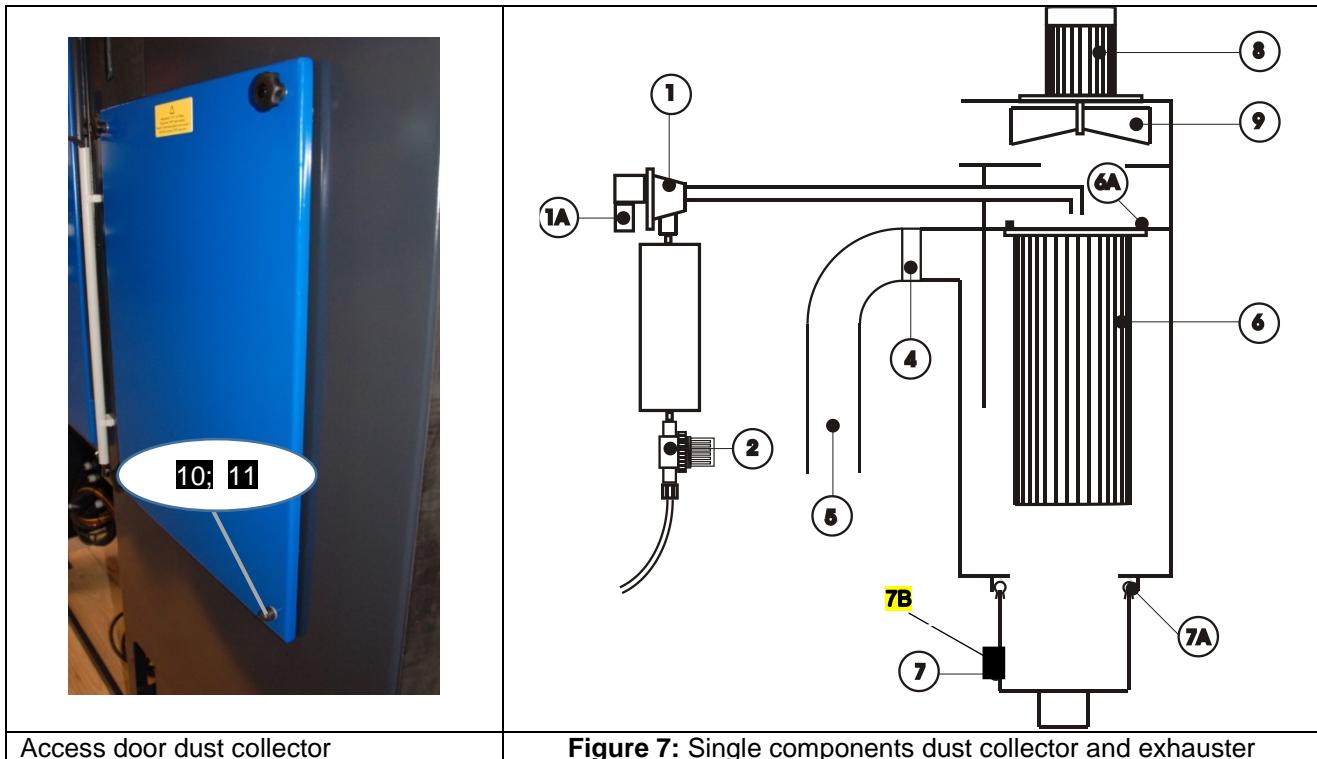

Swirl brake in sieve – item 8a

Pos.	Description	Pulsar III	Pulsar VI a. VI +	Pulsar VIII a. VIII+
ohne	Cyclon PA-VI pressure Mod 05 complete	-	100990	100990
(1)	Adaptor Ø 100 / 4"	12376Z	-	-
-	Elbow PA-VI pressure inlet ø 125 mm / 5"		99575Z	99575Z
(2)	Gasket adaptor for Ø 100	11746Z	-	-
-	Gasket adaptor for Ø 125		11779Z	99575Z
(3)	Adaptor 150 mm / 6"	20343Z	20343Z	20343Z
(4)	Gasket for cleaner per m (outlet)	99751Z	99751Z	99751Z
(5)	Clamp for Ø 100	90241Z	-	-
-	Clamp for Ø 125	-	90260Z	90260Z
-	Clamp for Ø 150	90261Z	90261Z	90261Z
(6)	Suction hose ø 100 mm / 4"	12447Z	12447Z	12447Z
-	Suction hose ø 125 mm / 5"	12449Z	12449Z	12449Z
-	Suction hose ø 150 mm / 6"	12452Z	12452Z	12452Z
(7)	Door gasket cyclon	11745Z	11745Z	11745Z
(8)	Screen new-reclaimer	21265Z	21265Z	21265Z
(8a)	Swirl brake	JH160063	JH160063	JH160063
(9)	Door	14271Z	14271Z	14271Z
(10)	Hook ASSY	12263Z	12263Z	12263Z
(11)	Rubber lined plate for 300 CFM	11984Z	11985Z	11985Z
(12)	T-piece 1 " no. 130	94201D	94201D	94201D
(13)	Pipe plug 1 "	01701D	01701D	01701D
(14)	Hose nipple 1"x25mm	94301D	94301D	94301D
-	Plug NPT 1"	12011D	12011D	12011D
-	Plug 1" with holes	27349Z	27349Z	27349Z

9.8 Dust collector and exhauster

Access door dust collector

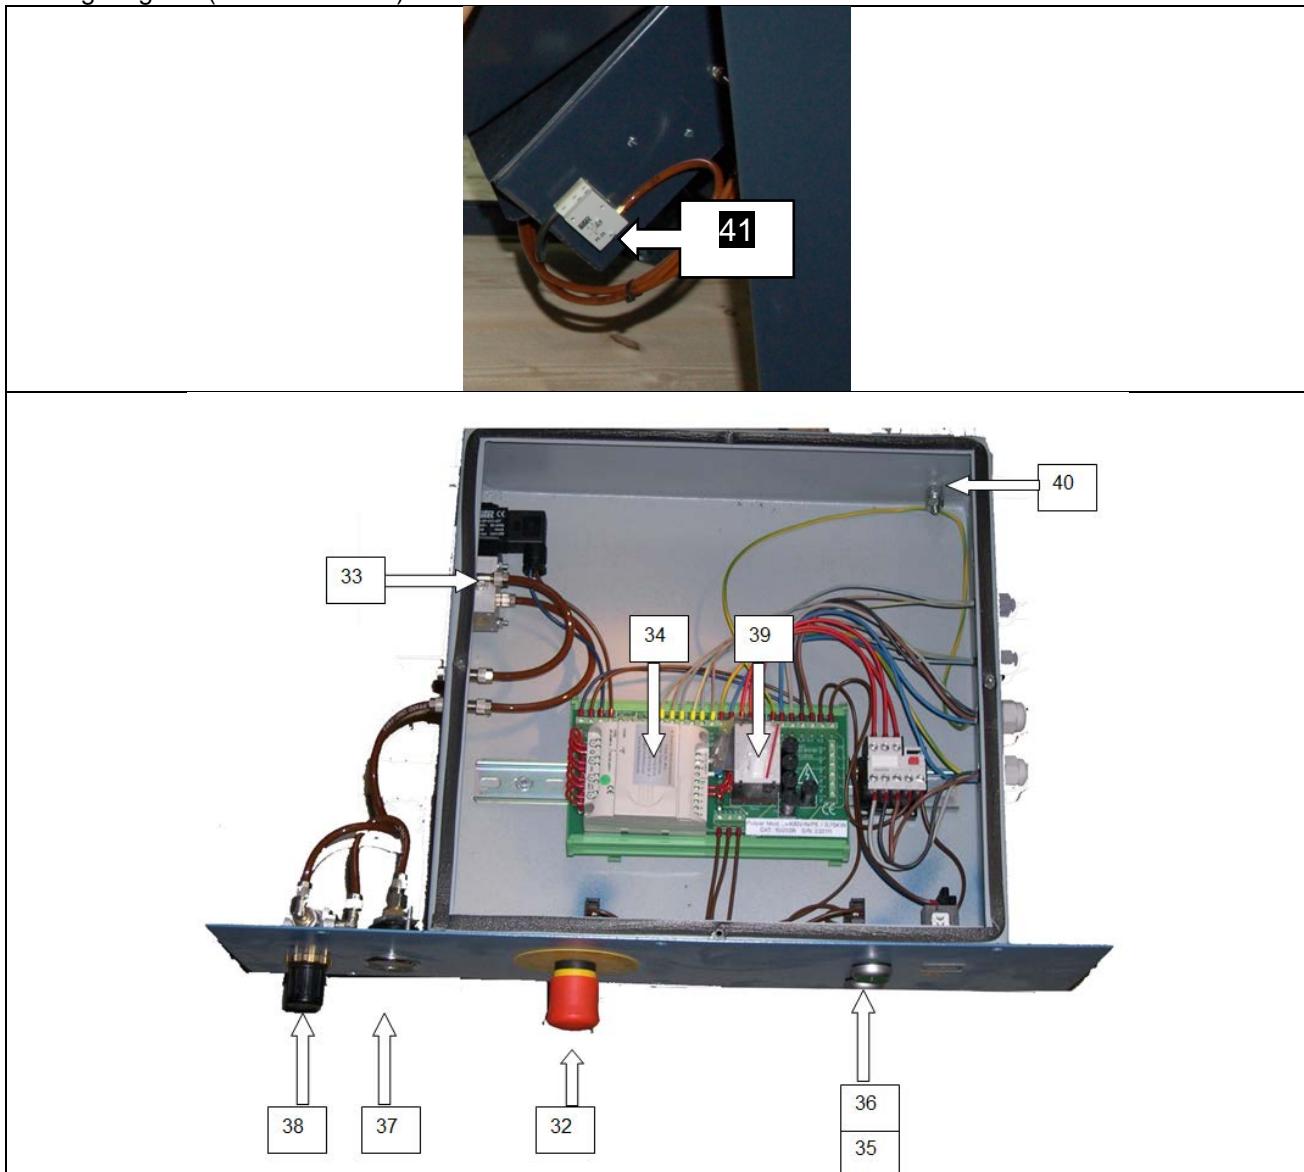

Figure 7: Single components dust collector and exhauster

Pos.	Description	Pulsar III	Pulsar VI & VI +	Pulsar VIII & VIII+
(1)	Valve ASCO Pulsar	90804Z	90804Z	*1)
(1A)	Solenoid valve 220V	100039	100039	*1)
(2)	Pressure regulator 1/4" with gauge	100061	100061	100061
(4)	Clamp for Ø 150 mm / 6"	90761Z	90761Z	90716Z
(5)	Suction hose Ø 150 mm / 6" per m	12452Z	12452Z	12452Z
(6)	Filter cartridge	100537	100537	100537
(6A)	Screw M10 x 45 (per piece)	99081D	99081D	99081D
(7)	Dust container	ohne	ohne	ohne
(7A)	Gasket for dust container	100832 2 m	100832 2 m	100832 2 m
(7B)	Pneumatic dust container contact (3/2 directional control valve, pneumatic)	12202Z	12202Z	12202Z
(8)	E-Motor 0,75KW /230 / 410V, 2800 rpm	19026Z	19026Z	19026Z
(9)	Paddle wheel	19235Z	19235Z	19235Z
(10)	M8 earthing nut with shim	27241Z	27241Z	27241Z
(11)	M8 protective cap for earthing nut	90831Z	90831Z	90831Z

*1) actually no part number-on demand

9.9 Control box

Wiring diagram (see control box)

Pos.	Description	Pulsar III	Pulsar VI & VI +	Pulsar VIII & VIII+
(32)	Emergency STOP button	100742	100742	100742
(33)	Solenoid valve 1/8"	100741	100741	100741
(34)	Module- Pulsar	100735	100735	100735
(35)	Push button (green)	100736	100736	100736
(36)	Push button (red)	100737	100737	100737
(37)	Gauge	11831Z	11831Z	11831Z
(38)	Pressure regulator	100061	100061	100061
(39)	Fuses F1 to F5 per piece	100743	100743	100743
(40)	Earth screw	100732	100732	100732
(41)	Signal converter- pneumatic-electric (pressure control device)	100835	100835	100835

9.10 Grounding

Pos.	Description	Pulsar III	Pulsar VI a.VI +	Pulsar VIII a.VIII+
(-)	Earth screw M8 complete with nut, lug and earth washer	100732	100732	100732
(-)	Ground wire 10 mm ² per m	100769	100769	100769

9.11 Options, Accessories

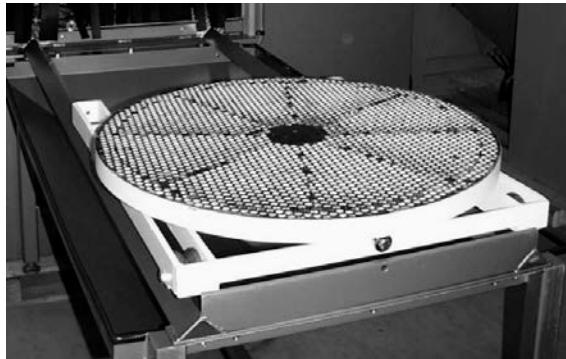

Figure 8: Track assembly: truck, hopper, work car with turntable

Pos.	Description	Pulsar III	Pulsar VI and VI+	Pulsar VIII and VIII+	Re-fitting requirements
(-)	Turntable, truck, hopper + work car	13530Z	12835Z	12835Z	Opening for rails
(-)	turntable Ø 760 mm only	90881Z	90881Z	90881Z	
(-)	wheel for work car without bearing	90987Z	90987Z	90987Z	
(-)	Stationary turntable Ø 760 mm complete	99840Z	99840Z	99840Z	keine
(-)	Gate 300 x 300 mm (per pcs.)	100282	100282	100282	Openings in door
(-)	Gate 400 x 400 mm (per pcs.)	*1)	100283	100283	Openings in door
(-)	Port 300 x 300 mm including mounting	90681Z	90681Z	90681Z	Openings in door
(-)	Port 400 x 400 mm including mounting	*1)	100302	100302	Openings in door
(-)	Tumble 4,5 l complete with E-motor 230V (door mounting possible))	100549	100549	100549	Openings in door Setting electrical connections
	Tumble 30 l complete with E-Motor 230V (door mounting possible)	Not recommended	100548	100548	Openings in door Setting electrical connections
(-)	Tool for window installation	12176Z	12176Z	12176Z	

*1) not possible

9.11.1 Further options

	Re-fittings possible by customer?
Reinforcements for loadings till 5000 N	Conditional
Reinforcements for loadings till 20000 N	No
Rubber coating	Yes
PU-coating	NO
Grounding the nozzle	Yes

9.12 Control box- binding plan for 3x400 V, 0.75 kW

See control box

10 Disposal

Unless a return or disposal agreement has been made, recycle the dismantled components:

- Scrap metals.
- Send plastic elements for recycling.
- Dispose of remaining components sorted according to material properties.

	<p>ATTENTION!</p> <p>Environmental damage through incorrect disposal! Electronic scrap, electronic components, lubricants and other auxiliary materials are subject to hazardous waste treatment and may only be disposed of by approved specialist companies!</p>
---	---

The local authority or special waste disposal companies provide information on environmentally friendly disposal.
