1 Abbreviations, definitions, symbols and icons

	Risk of injury! Connect electric circuit points only by authorized electrician		Electrostatic strokes! Ground!
	Noise > 85dB(A)! Wear ear protection		Explosion hazard caused by dust! Ground!
	Explosion hazard! Connect only max. admitted pressure.		Risk of injury! Discharge completely pressure during maintenance jobs.

2 General information

2.1 Technical documents

The technical documents are part of the machine and contains important manufacturer information. The technical documentation is intended for everyone who uses the cabinet.

These operating instructions provide important information on handling the device. The precondition for safe working is compliance with all specified safety instructions and handling instructions. In addition, the local accident prevention regulations applicable to the area in which the device is used and the general safety regulations must be followed. Read the operating instructions carefully before starting any work! It is part of the product and must be kept in the immediate vicinity of the device and be accessible to staff at all times. These technical documents must be made available to all persons who use the blasting cabinet under their own responsibility. Those responsible for the plant and operation must ensure that the documentation has been read and understood completely. On the basis of this documentation and taking into account the industrial safety regulation, appropriate maintenance and test plans as well as operating instructions for the operating and maintenance personnel must be derived.

	NOTE! The illustrations in these instructions are for basic understanding and may differ from the actual design of the device.
---	--

2.2 Other applicable documents

The following operating instructions must also be noted:

Operating instructions for the cyclone

Operating instructions for the MBX Filter

3 Product description

	Remarks
Cabinet	none
Cyclone	none
Dust collector	Pay attention to the owners manual of the used type

3.1 Conventional utilization and restrictions

	BNP 65	BNP 220	BNP 601	BNP 721
Max. loading rate of the grate /floor	1000 N 100 kp	1000 N 100 kp	2500 N 250 kp	2500 N 250 kp
Max. loading rate of the housing	2000 N 200 kp	2000 N 200 kp	10 000 N 1000 kp	10 000 N 1000 kp
Max. load rating with rack (standard)	2000 N 200 kp	2000 N 200 kp	2500 N 250 kp	2500 N 250 kp
Operating time	Continuous duty			
Basic parameters	See attached yellow cover			

3.2 No conventional utilisation – Warnings for misuse

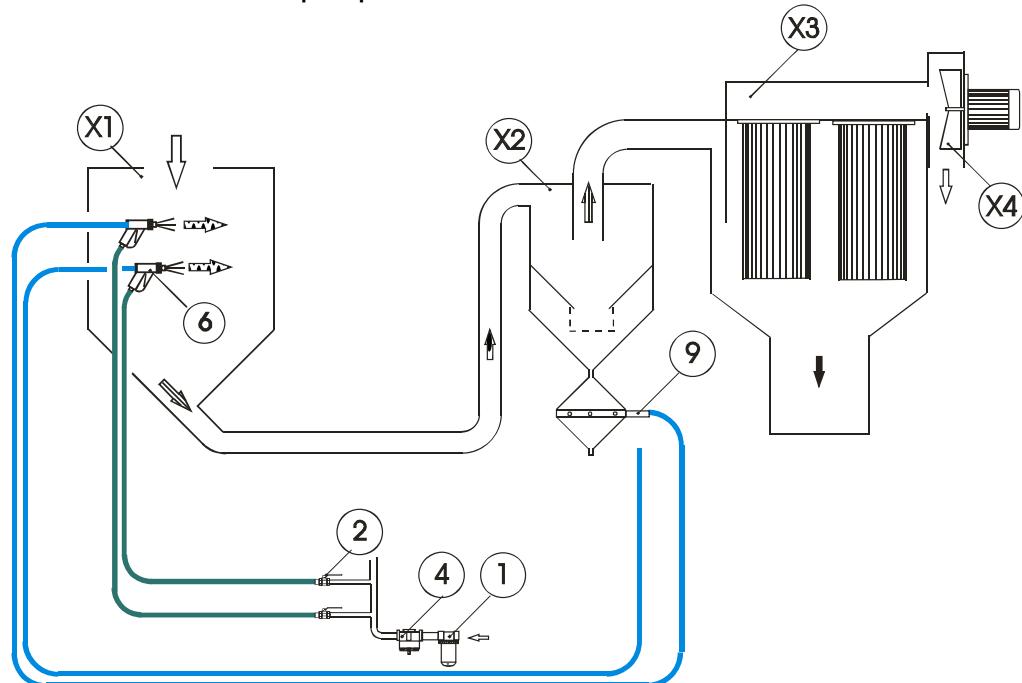

Utilization is interdicted:

As a blow –off cabinet in use of explosive and/or harmful solvents

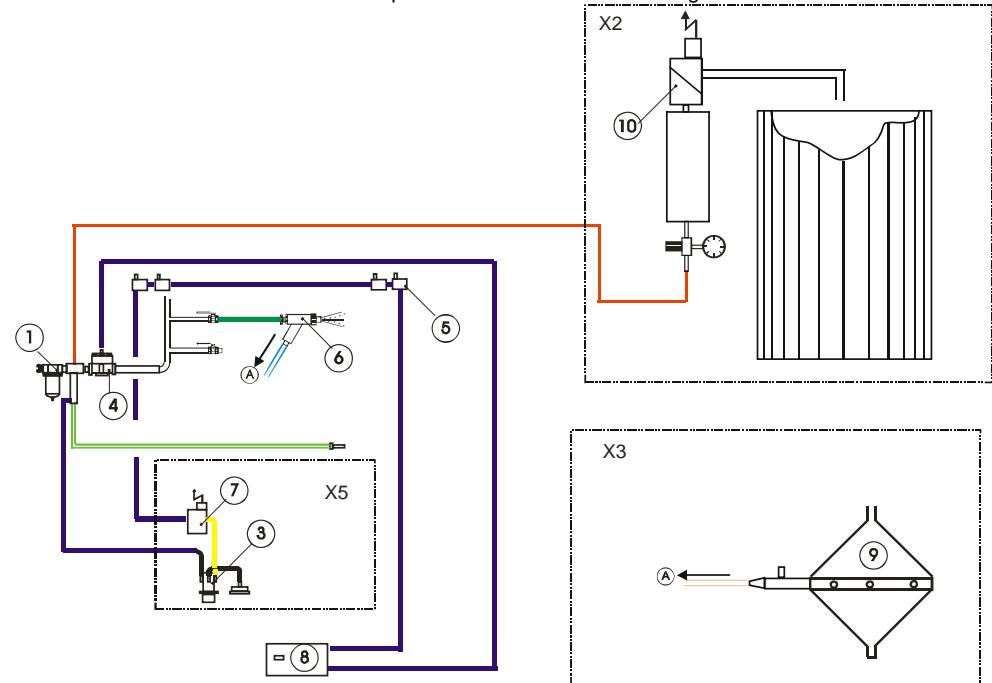

- in explosion hazard zones
- for blasting parts, where hazardous materials were released
 - o by explosion hazards
 - o which where not retained enough by the dust collector
 - o which causes damages caused to somebodys health during a defectuous dust collector

3.3 Operating mode of the complete system

Abrasive circuit flow - Basic principle

Pneumatic flow scheme - colours of pneumatic hoses are not binding

	Pure air	6	Blast gun
	Abrasives, dust and air	7	3/2-way solenoid valve
	Abrasive and air	8	Foot pedal; 3/2-way valve
	Dust and air	9	Sputnik + Metering valve
	Dust	10	Diaphragm valve /cleaning
1	Moisture separator, dust collector	X1	Blast cabinet
2	Ball valve	X2	Cyclon /Reclaimer
3	1/4 " regulator (pilot)	X3	Cartridge dust collector
4	Pressure regulator (main)	X4	Exhaust muffler
5	Pneumatic door interlock - 3/2-way valve	X5	E-box

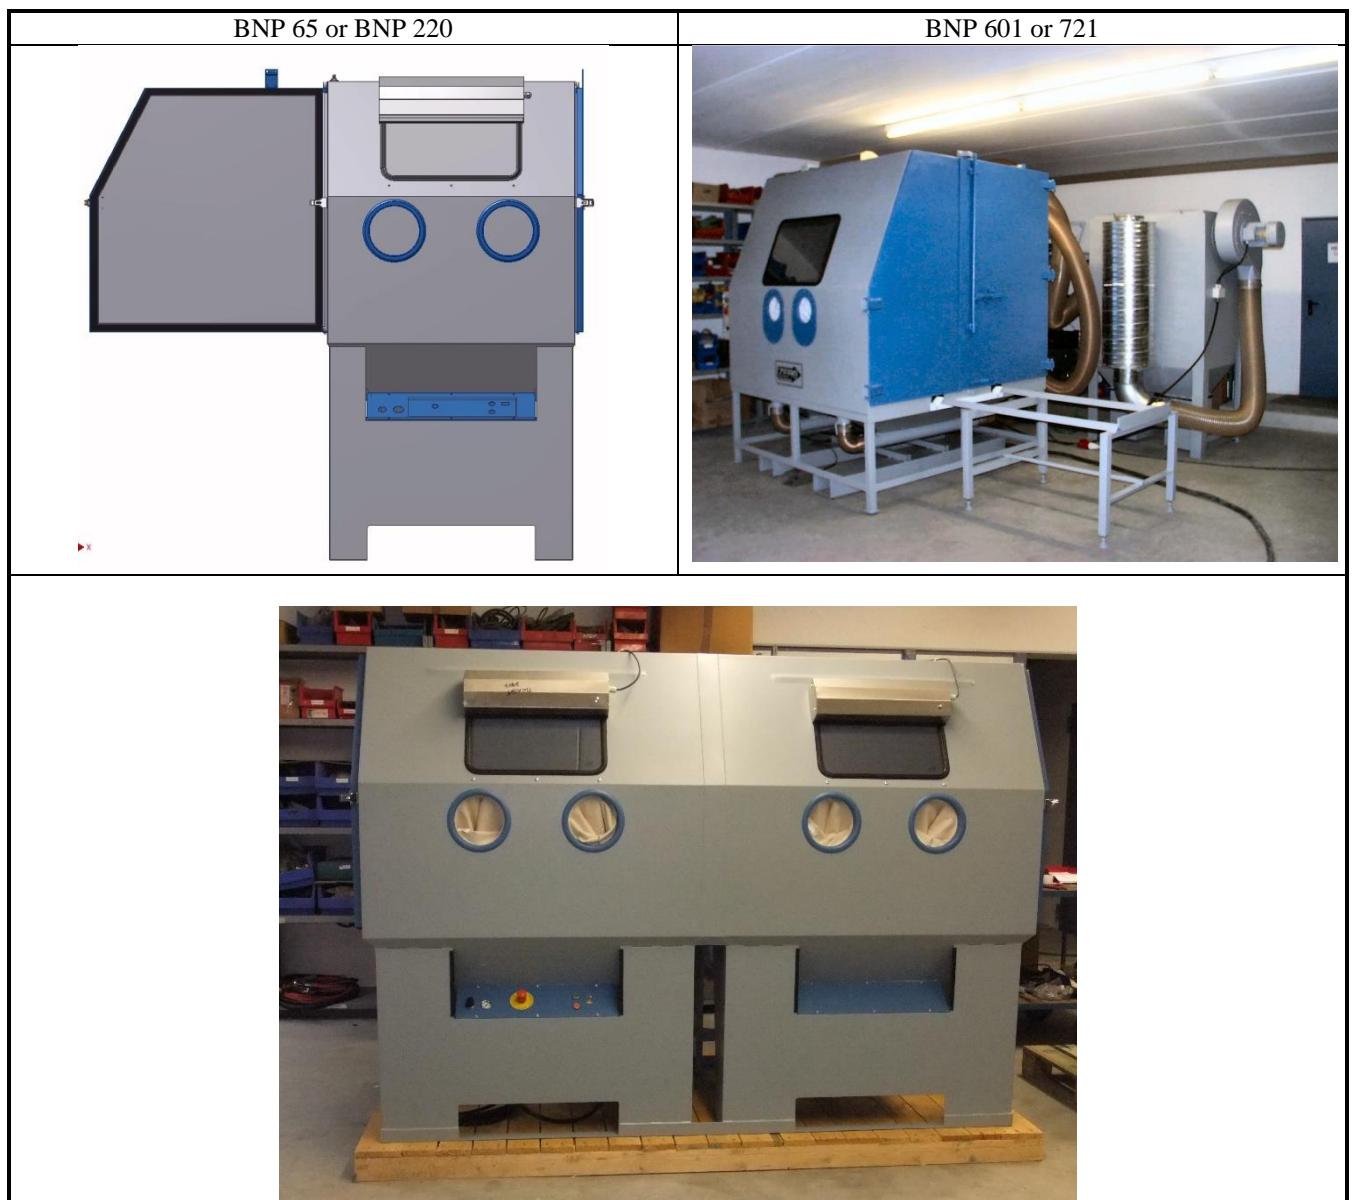

Figure 1

Figure 1 shows the pneumatic circuit of a BNP suction cabinet. The compressed air is fed into the system via a water separator (item 1), reaches the pilot regulator (item 3) via the air hose and from there to the door safety valves (item 5). If the foot pedal (pos. 8) is pressed and the cabinet doors are closed (door safety valves pos. 5 released), the control air flows to the pressure regulator (pos. 4) and compressed air flows to the injector jet gun (pos. 6). The abrasive is sucked out of the cleaner (reclaimer) with the abrasive hose and the blasting process begins. The desired pressure is set with the pilot regulator (item 3).

If the foot pedal is released, the blasting process is interrupted. This is also interrupted when the doors are opened (door safety valve pos. 5 closes).

The contaminated blasting media in the hopper floor of the blasting cabinet is sucked into the recovery system by the fan and cleaned using the cyclone principle (see picture for arrangement). The light impurities (dust) are transported with the air flow to the dust filter, the heavy particles fall down into the cyclone, whereby the oversized particles are caught with a coarse sieve. This completes the cycle.

3.4 Description

3.4.1 Media-recovery system (Cyclone)

- Cyclone principle
- Deposition of:
 - o Dust in dust collector
 - o Good media in circuit
 - o Coarse impurities in screen

3.4.2 Dust collector cartridge

- Standard: cartridge dust collector MBX
- Automatically cleaning with jet pulse and after running process
- Recommandations for MBX-Filter
 - Pulse interval: ca. 40..60 s
 - Pulse duration: ca. 500 ms
 - Follow up cleaning: ca. 5min
- exchangeable cartridge.
- Dust container

3.4.3 Control elements

	where	notes /functions
Pressure regulation blasting	Control box	2 to 7 bar
Dedusting filter cartridge	Pressure regulator on air balance vessel – Backside of blast cabinet	Preference pressure: 5 bar
ON/OFF	Control box	Activating: - Control circuit -Fan -Light -Filter cartridge dedusting function (After running process)
Emergency STOP	Control box	Deactivating electrical supply

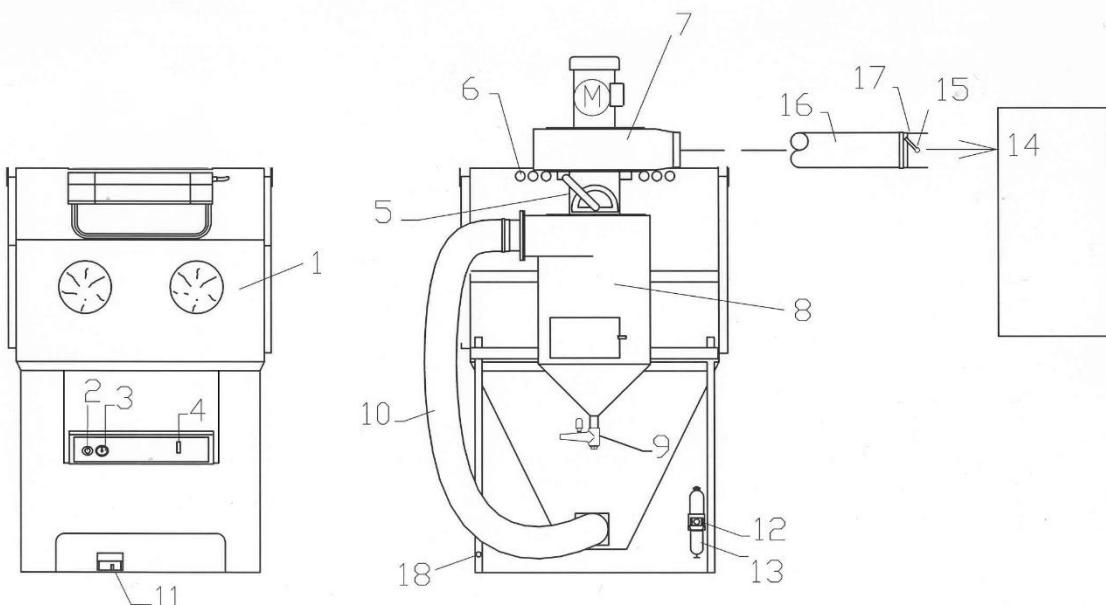

Figure 2: BNP-Suction blast cabinet

Pos. 1	Blast Cabinet
Pos. 2	Pilot regulator
Pos. 3	Manometer
Pos. 4	ON / OFF switch
Pos.5	Adjustable vortex cylinder (optional)
Pos.6	Air inlet
Pos.7	Ventilator
Pos.8	Cyclone
Pos.9	Metering valve

Pos.10	Suction hose
Pos.11	Foot pedal
Pos.12	Compressed air connection
Pos.13	Water separator
Pos.14	Filter
Pos.15	Control flap
Pos.16	Suction hose
Pos.17	Adapter inlet
Pos.18	Grounding screw

3.5 Energy consumption

- Air consumption: see yellow cover
- Electrical connection: see machine shield

3.6 Emissions

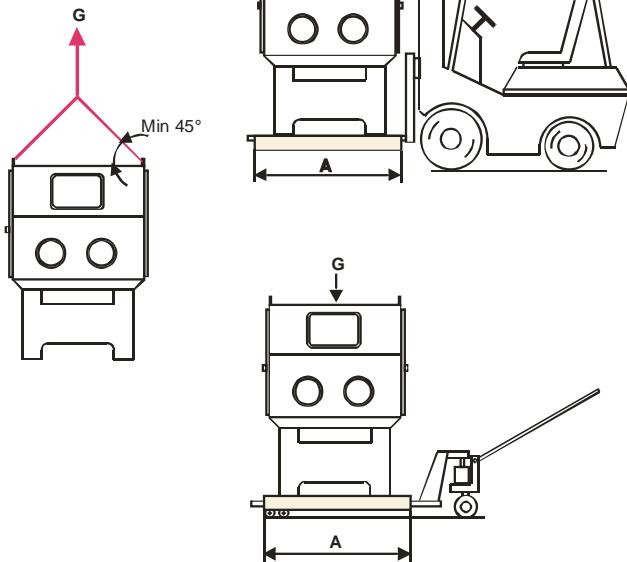

See yellow cover.

4 Set-up for initial installation

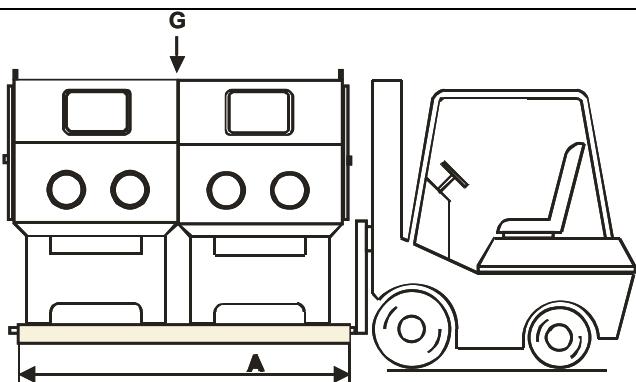

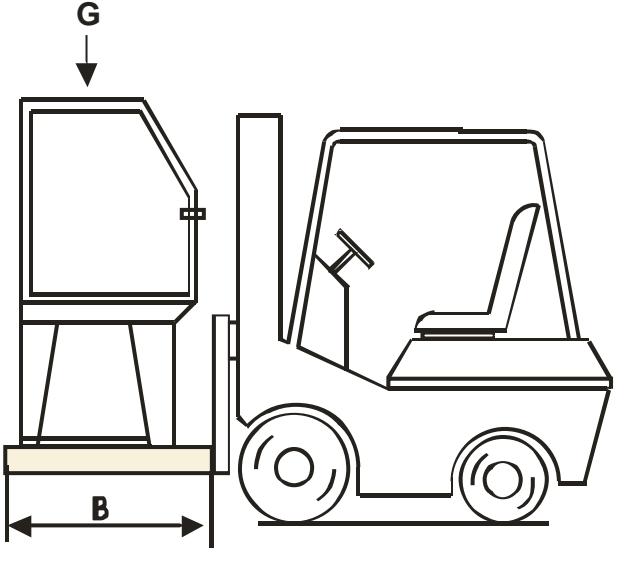

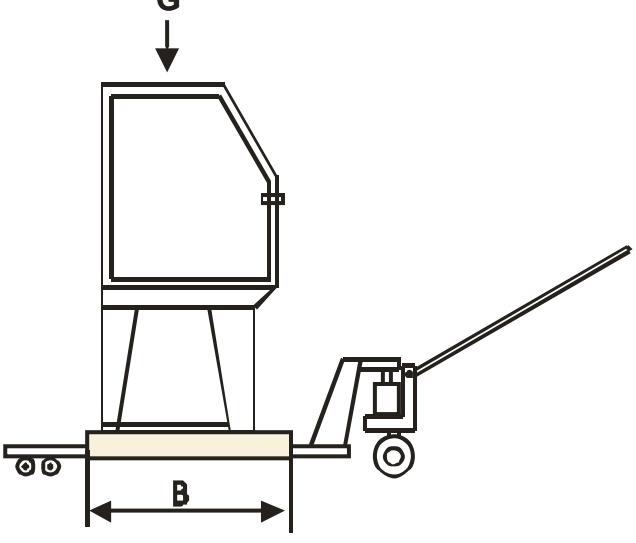

4.1 Carriage / Handling

4.1.1 BNP 65 und BNP 220

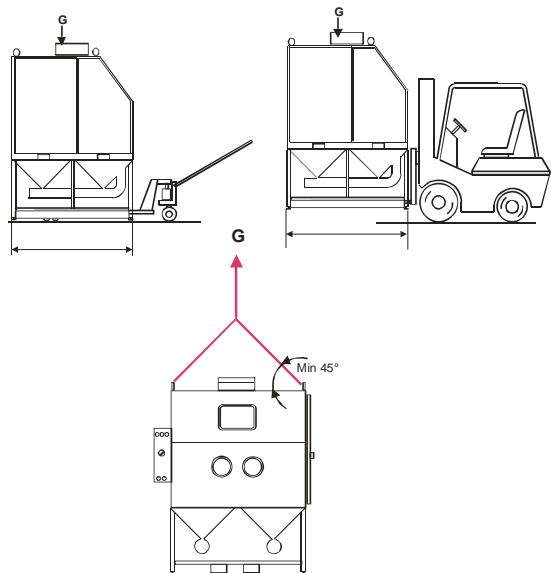

BNP	G (weight)	A (mm)
65	2500 N 250 kg	1100
220	2800 N 280 kg	1450

4.1.2 BNP 75 und BNP 85

	<table border="1"><thead><tr><th>BNP</th><th colspan="2">Weight</th><th>A (mm)</th><th>B (mm)</th></tr></thead><tbody><tr><td>75</td><td>5000N</td><td>500 kg</td><td>2200</td><td>1200</td></tr><tr><td>85</td><td>5600 N</td><td>560 kg</td><td>2900</td><td>1300</td></tr></tbody></table>	BNP	Weight		A (mm)	B (mm)	75	5000N	500 kg	2200	1200	85	5600 N	560 kg	2900	1300	
BNP	Weight		A (mm)	B (mm)													
75	5000N	500 kg	2200	1200													
85	5600 N	560 kg	2900	1300													
																	
																	

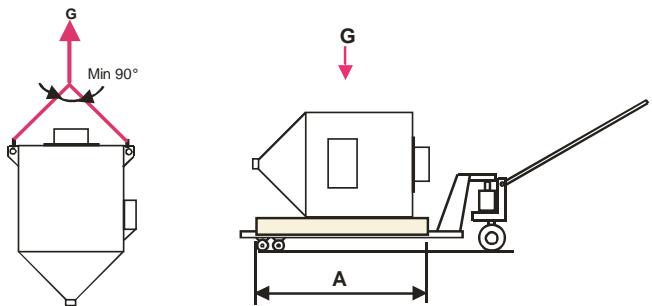

4.1.3 BNP601 und BNP 721

BNP	G (weight)		A (mm)
601	8000 N	800 kg	1500
721	10 000 N	1000 kg	1850

* Euro palett 800 x 1200

4.1.4 Cyclone

Type	G (weight)		A (mm)
900	500 N	50 kg	1200 mm*)
1200	700 N	70 kg	1200 mm*)

4.2 Unpackung and disposing the packing material

Pallet: Wooden pallets 800 x1200

Plastic film

4.3 Voraussetzungen zum Aufstellen einer Kabine

- Basic allowance: see yellow cover sheet

4.4 Componentents

4.4.1 Blast Cabinet

These consists of a stable steel construction and are designed as dust-tight vacuum cabins.

Model BNP	Size Work area H x B x T[mm]			Number of the doors
	875	915	835	
65	875	2x915	835	2
75	970	1255	935	2
220	970	2x1255	935	2
85	1450	1450	1450	2
601	1660	1780	1780	1*
721				1*

* Doors divided into two.

Table 1: Standard cabinet types

- ⇒ Doors for bringing in the materials.
- ⇒ Hand holes with adapted work gloves for carrying out the blasting work.
- ⇒ Viewing window for observing the blasting process.
- ⇒ BNP- injector gun.
- ⇒ Extraction hose (dimensions matched to the application).
- ⇒ Blasting room lighting.
- ⇒ Blow-off gun for blowing off dust and blasting media from workpieces
 - Control and safety devices
 - ON / OFF switch for blasting room lighting
 - Foot pedal for switching the blasting process on and off.
 - Pilot regulator with manometer for controlling the pressure regulator and for setting the jet pressure.
 - Safety circuit for automatic shutdown of the blasting process if the doors are accidentally opened prematurely.

4.4.2 Recovery system

See separate owner's manual.

The size of the cyclone is matched to the size of the cabinet.

Type	Suction power [m³/min.] resp. [cfm]	Electric motor fan	Befestigung
600 cfm	16,8 / 600	380V / 0,75 kW	Cabinet back wall
900 cfm	25,4 / 900	380V / 2,2 kW	Detached
1200 cfm	34 / 1200	380V / 4,0 kW	Detached

Table 2: Sizes of abrasive recovery systems

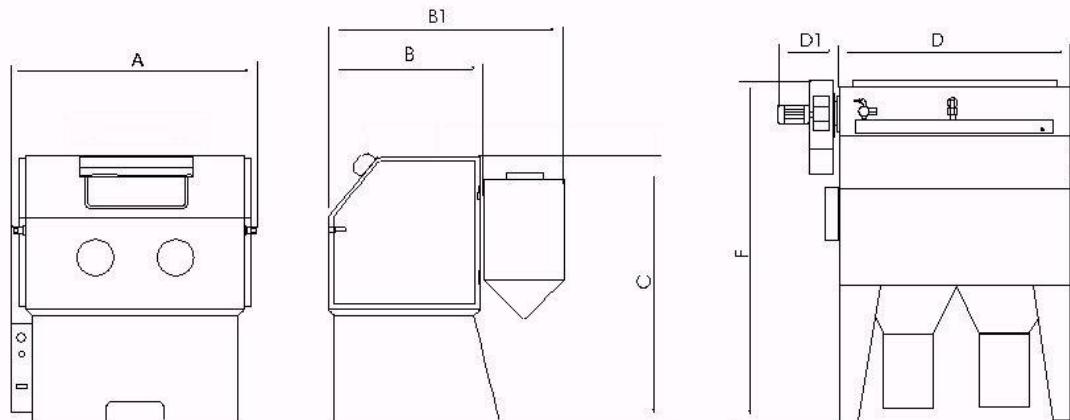

4.4.3 Dust collector

See separate owner's manual.

4.5 Requirements for setting up a cabinet

Basic requirements: See yellow cover sheet

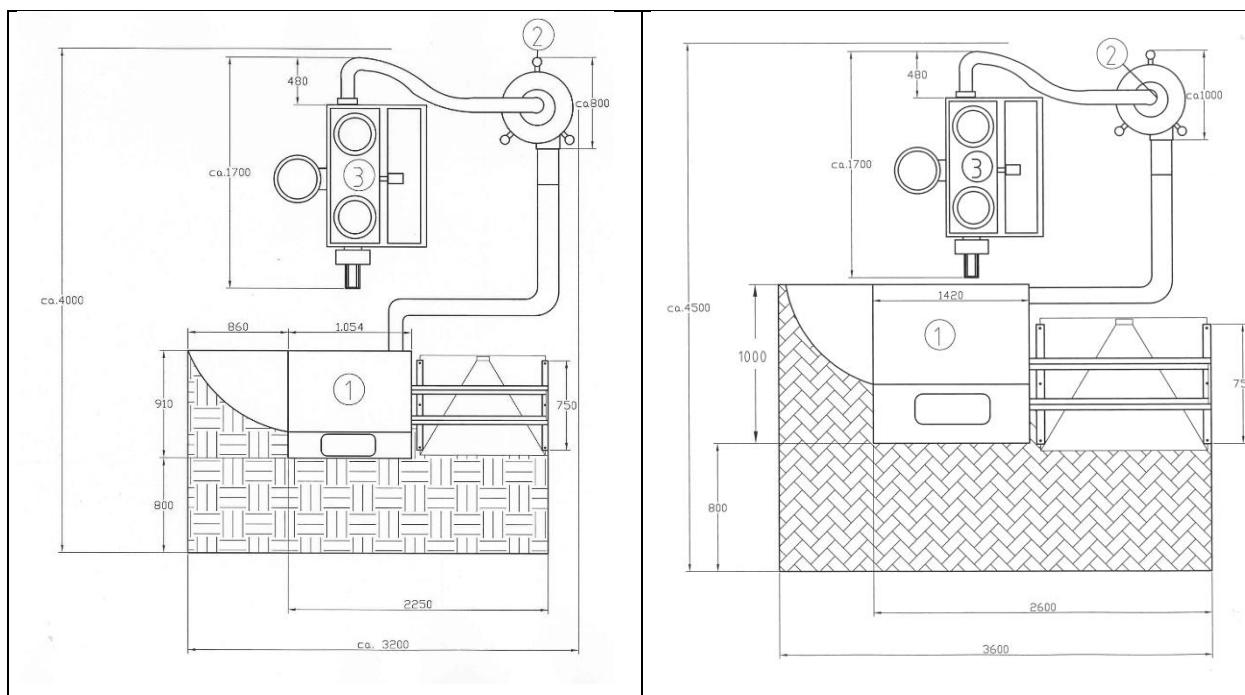

Space requirements:

	BNP 65	BNP 75	BNP 220	BNP 85		MBX 1500
A =	1054 mm	2 x A	1420 mm	2 x A mm	D =	1200 mm
B =	910 mm	910 mm	1000 mm	1000mm	D1 =	480 mm
B1 =	1460 mm	1460 mm	1550 mm	1550 mm	F =	2090mm
C =	1970 mm	1970 mm	2105 mm	2105 mm		

Picture 3a: Space requirements BNP-65, 75, 220 & 85

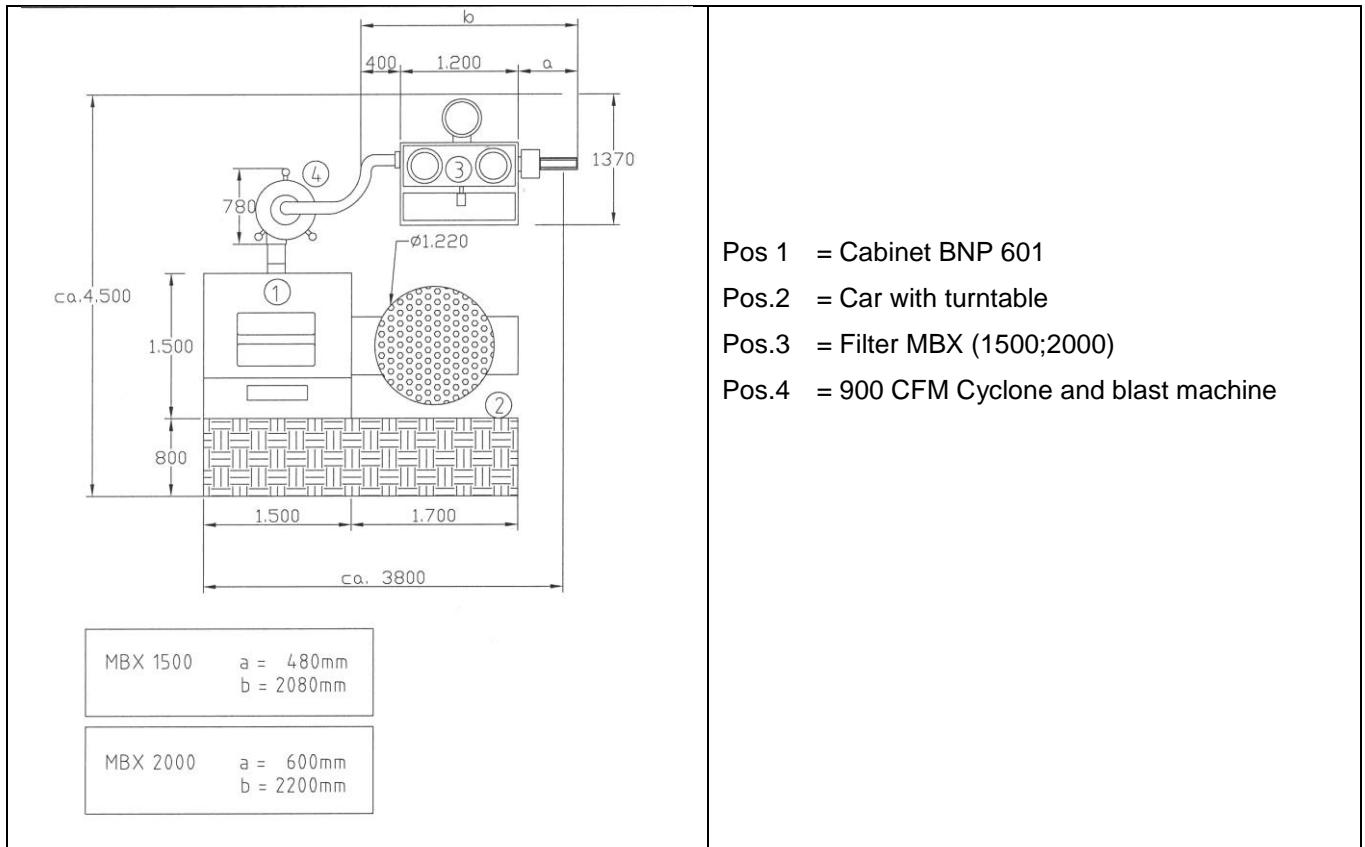

with Cyclon 600 CFM (on the rear wall of the cabinet) and MBX dust collector

Picture 3b: Required space for BNP-65 & 220 with stand alone cyclone and MBX-filter

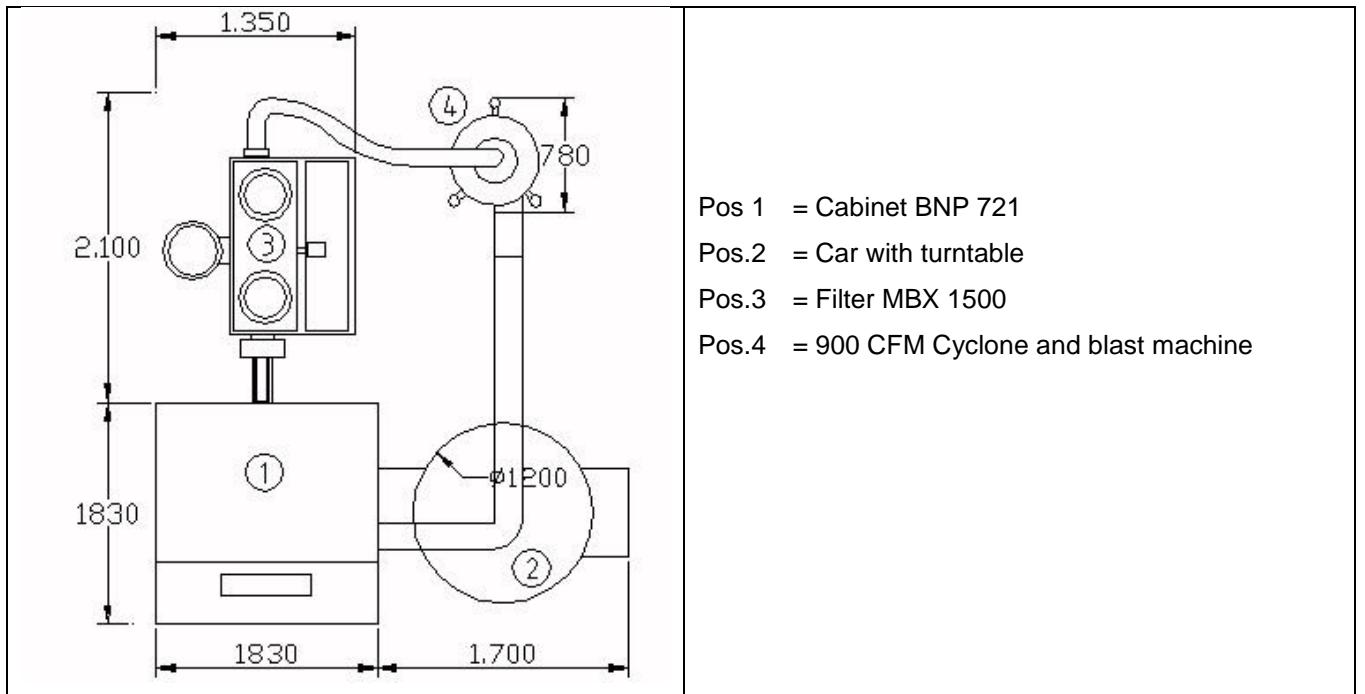

Pos 1	BNP 65(left) und BNP 220 (right)
Pos 2	Cyclon (900 oder 1200 CFM) + blast pot
Pos 3	MBX Filter 1500 CFM

Required space for BNP 601

Picture 4a: Required space for BNP-601

Required space for BNP 721

Picture 4b: Required space for BNP-721

4.6 Installation, assemble and function test

Cabinet set-up.	<ul style="list-style-type: none"> - Requirements: see yellow cover - Bracing in the floor not necessary 	
	 Warning	Warning! Explosion hazard! Connect only max. admitted pressure
Air supply	<ul style="list-style-type: none"> - max. 7 bar - for higher pressures install pressure regulator and safety valve between cabinet and air supply - air hose between air supply and cabinet: <ul style="list-style-type: none"> + Inner diameter : min 19 mm + Length: max. 10m 	
Filter cartridge dedusting	Adjust pressure regulator for dedusting to 5 bar	
	 Warning	Warning! Risk of injury! Connect electric circuit points only by authorized electrician.
	 Warning	Warning! Explosion hazard caused by dust! Ground!
	 Caution	Caution! Risk of injury! Ground!
Electrical connection and grounding	<ul style="list-style-type: none"> - 16A Euro plug connector - Ground cabinet, cyclone and dust collector <ul style="list-style-type: none"> - min 10 mm² - earth screw in stock, ground wire etc. no shipment 	
	 Caution	Caution! Noise > 80dB(A) Wear ear protection!
Operation checkout without media	<p>Close the doors.</p> <p>Switch-on electricity (green push button). Control the following:</p> <ul style="list-style-type: none"> - Is lighting on? - Is the fan motor starting? Turns the motor in direction of the arrow? Otherwise reverse the polarity. - Is dedusting pulse for cartridge filter active? (Interval. ca 40 s) - Take the nozzle in your hand and press the foot pedal. Is the blast process starting? - Step on the foot pedal and open left resp. right door (second. person). Is the blast process stopping? Test cabinet with media, if no irregularities can be detected. Otherwise remedy errors. Therefor see section 7. 	
Media loading	<ul style="list-style-type: none"> - Exhauster off. 	

	<ul style="list-style-type: none"> - Add media slowly into reclaimer hopper through the reclaimer door. - Media capacity (initial fill): <ul style="list-style-type: none"> BNP 65: 5 l BNP 220: 10 l BNP 601 / 721: 25 l 	
		Caution! Noise > 80dB(A) Wear ear protection!
<i>Operation checkout with media</i>	<ul style="list-style-type: none"> - Close doors. - Adjust blast pressure. - Hold nozzle in direction grate. Step on the foot pedal → Blast process starts - Check, if dust passes off (second person). Critical zones: <ul style="list-style-type: none"> - Doors - suction hose connections - Connections between dust collector and dust container. Leak tightness can be remarked only during dedusting. 	

5 Operating

5.1 Installation and operation, shut down after work

<i>Turn on air supply</i>	
<i>Adjust blast pressure</i>	
<i>Switch on electricity</i>	Main switch and green push button
<i>Load parts to be blasted into the cabinet</i>	Close doors
<i>Blasting</i>	Hold blast the gun/nozzle and step on the foot pedal
<i>Blow off media</i>	Clean parts with blow off gun
<i>Disconnect electricity</i>	<ul style="list-style-type: none"> -Main switch - Red push button - Dedusting process works still for ca. 5 min
<i>Disconnect air supply</i>	

5.2 Emergency stop

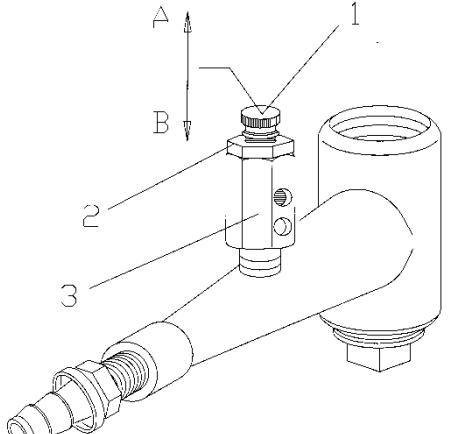

<i>Push emergency stop button</i>	Electrical supply is disconnected, dedusting too	
-close external air supply		Depressurize moisture separator over drain screw
Clarification of causation		

5.3 Shut down by longer interruption of work or moving the cabinet

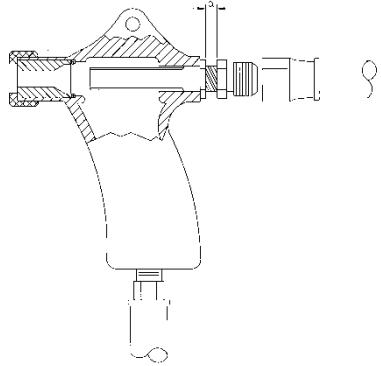

<i>Remove media</i>	see 5.4.4.	
<i>Disconnect electricity</i>	Authorized electrician	
<i>close external air supply</i>		Depressurize moisture separator over drain screw

5.4 Special procedures

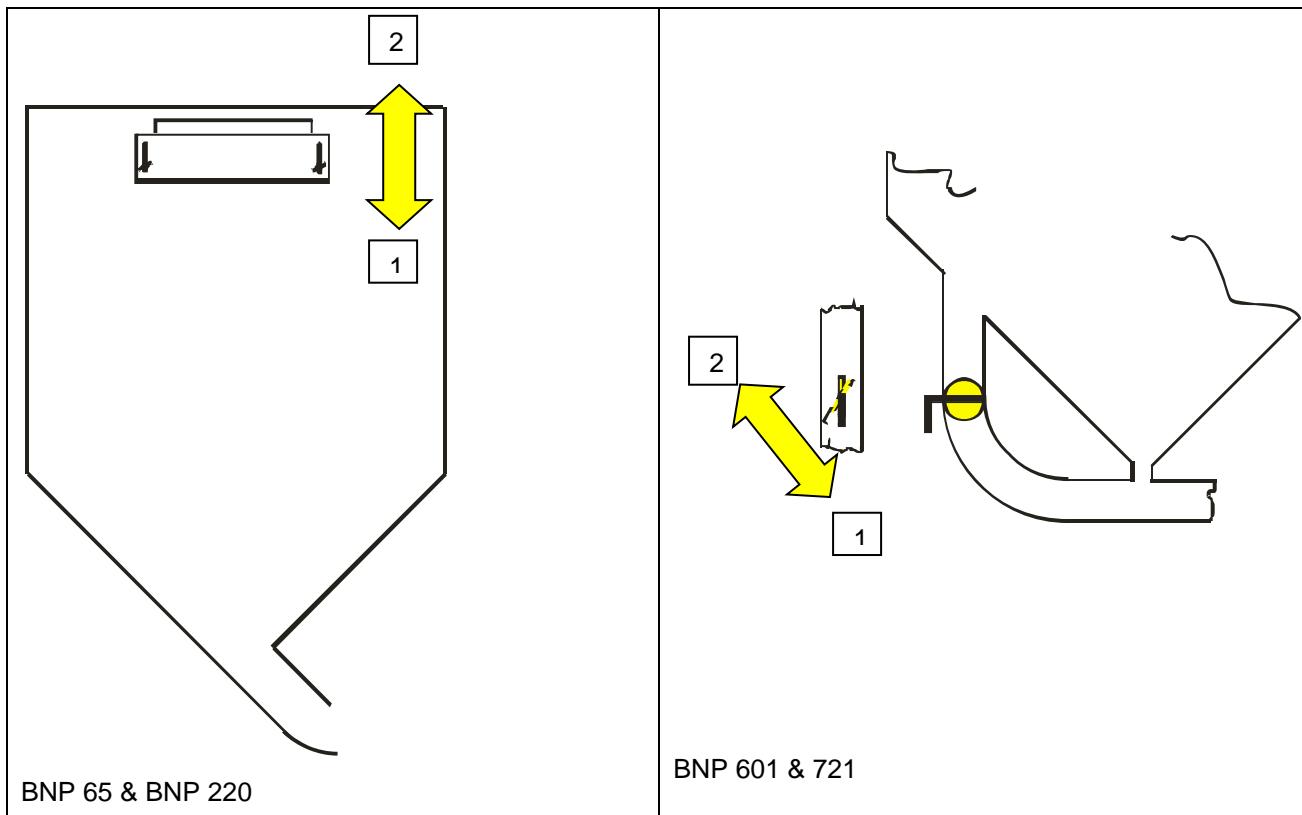

5.4.1 Adjust media / air mixture

	<table border="1"> <thead> <tr> <th>Pos.No.:</th><th>Description</th></tr> </thead> <tbody> <tr> <td>1</td><td>Adjust screw</td></tr> <tr> <td>2</td><td>Locking nut</td></tr> <tr> <td>3</td><td>Housing</td></tr> </tbody> </table> <p>Direction A → less media Direction B → more media</p>	Pos.No.:	Description	1	Adjust screw	2	Locking nut	3	Housing
Pos.No.:	Description								
1	Adjust screw								
2	Locking nut								
3	Housing								

5.4.2 Adjusting BNP gun

Please note the combination of air- and blast nozzle	-See schedule „air consumption“ yellow cover sheet -Worn nozzles influence the right rate
Turn the orifice into the BNP blast gun.	 <ul style="list-style-type: none"> Behind the locking nut should be seen 3,5 to 4 fully pitches of screw threat. (distance „a“)

5.4.3 View and media consumption

Damper	Negative pressure	View	Media exhausting / Consumption	Media suction
1	lower	better	higher	better
2	higher	worse	lower	worse

5.4.4 Media unloading

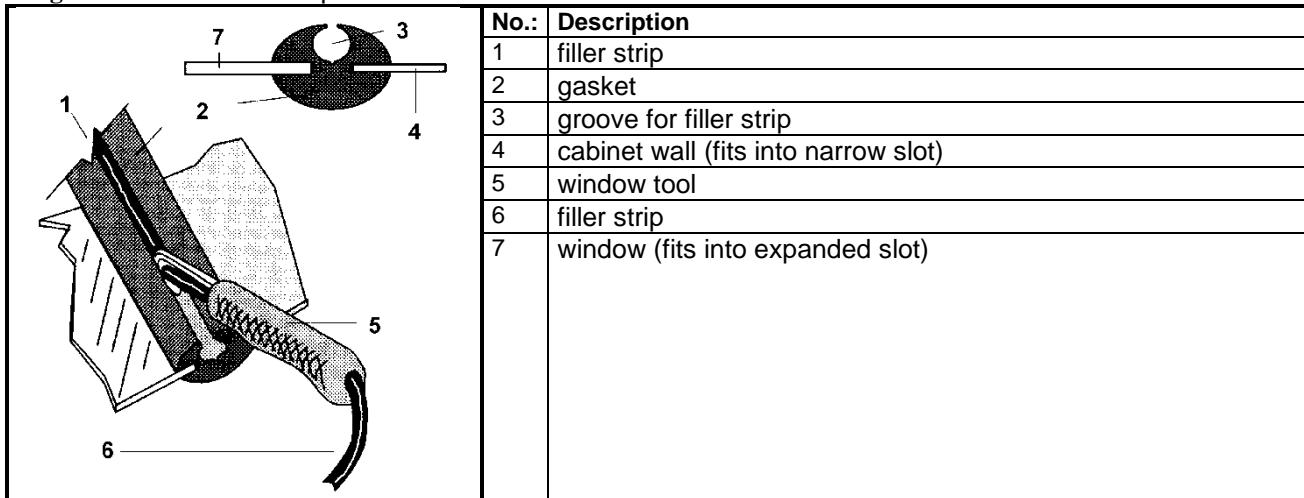

Turn on cabinet	Green button
Blow-off cabinet	-Doors closed -Exhauster working -With blow-off nozzle
Remove media from cyclon	- Turn off fan - Place an empty container under cyclon - Unscrew the plastic plug (wrench no.: 22) - Permit media to flow into container, lastly strike easily with your hand against the cyclon to let the rest flow out

5.4.5 Cleaning dust collector / replace cartridge / disposal of residues

See owner manual for dust collector.

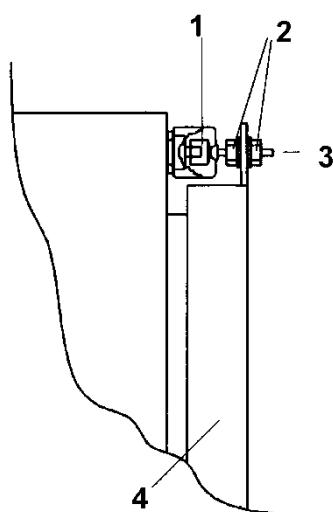

5.4.6 Window replacement

Figure 5: Thread filler strip

Pull filler strip out of window molding	
Remove window	Push the window from the cabinet inside
Install a new gasket	Groove facing the front of the cabinet
Install window	Push into the groove
Pull in filler strip	With installation tool

5.4.7 Adjust doorsafety interlock

No.:	Description
1	Door safety interlock
2	Nut for screw adjusting
3	Actuating screw for safety interlock
4	Cabinet door

Figure 6: Door safety interlock connection

6 Maintenance and cleaning

6.1 Preface

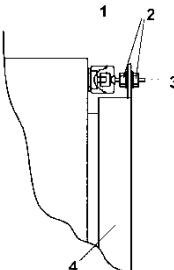

During operation the cabinets are exposed to wear. In order to ensure safe operation and high efficiency the blast machines must be maintained regularly.

	Warning	Warning! Risk of injury! Discharge completely pressure during maintenance jobs. (see 5.4.1)
--	----------------	---

6.2 If required

	Check and if necessary. replace /cleanse
<i>View window</i>	-Cover lenses -If necessary window glass – see 5.4.6
<i>Gloves</i>	

6.3 After max. 8 h of blasting

	Check and if necessary. replace /cleanse
<i>Door interlock</i>	 <ul style="list-style-type: none"> -Open doors - Press pin (1). It has to return from alone.

<i>Empty dust container (dust collector).</i>	- Could be necessary already after one hour
<i>Media recovery system (Reclaimer).</i>	- Empty screen → Turn off exhauster. This may be necessary more often - Screen magnet .
<i>Nozzle and nozzle holder</i>	- Check gasket for wear and replace if it's necessary

6.4 After max. 50 h of blasting

	Check and if necessary. replace /cleanse
(1) Blast gun and nozzle	- Nozzle gasket.
(2) Moisture separator.	- Clean filter and sight glass with soap and warm water
(3) Air hoses and blast hoses.	- Gaskets of couplings for wear - Blast hose by hand for soft spots

6.5 After max. 150 h of blasting

(1) Gasket on cabinet doors.	
(2) Filter cartridge.	- See owner manual „Dust collector“

6.6 After other periods of time

	replace (even without wear) after maximal
Blast hoses	6 years
Remote control hoses	6 years
Air hoses – external air supply	6 years
O-rings	5 years
Gaskets	5 years

7 Troubleshooting

Problem	Probable cause	Remedy
(1) Poor visibility.	Exhaust motor does not rotate.	
	Slide damper in false position	See 5.4.3
	Dirty filter cartridge.	Blow off filter cartridge. Replace
	Exhaust motor rotates in the wrong direction.	Reverse polarity (only through licensed electrician).
	Blast media breaks down rapidly and creates dust	- lower blast pressure - Other media.
	Blocked hose between blast cabinet and reclaimer / cyclone	Check and if necessary disassemble hose and remove dust and media. Blockage is not the real cause.
	Air leakage in the suction cycle.	Check the following components: - Reclaimer door open or leaky. - Test the connections of hose for leaks

		<ul style="list-style-type: none"> - Suction hoses for wear. - Dust leaking from dust container
(2) Abnormally high media consumption.	Cyclone door open or leaky.	Replace gasket.
	Too fine or too lightweight media.	Install and adjust supplementary a Vortex cylinder.
	Negative pressure to high	See 5.4.3
(3) Poor cleaning rate.	Not enough blast media in circuit.	Check and if necessary refill.
	Media metering valve is adjusted incorrect	A new adjustment is necessary (see 5.4.1).
	Reduced air-pressure	<ul style="list-style-type: none"> - Check air supply - If the static pressure decreases during blasting, the following components should be checked : <ul style="list-style-type: none"> + moisture separator + pressure regulator + nozzle
	Blocked blast hose or gun / nozzle.	<ul style="list-style-type: none"> - Push nozzle against an elastical object (for example rubber plate) and step on the foot pedal. - Disassembly hose or gun and cleanse. - Search after the cause of blockage: <ul style="list-style-type: none"> ⇒ Missing or overfilled screen in the reclaimer. ⇒ Incorrectly adjusted metering valve. ⇒ Too heavy blast media.
	Worn nozzle	-remove / change blast or air nozzle
(4) Dust comes out the blower	Moist blast media.	<ul style="list-style-type: none"> - Frequent bridging or blockage in the media metering valve can be caused by moist blast media. Following reasons could be possible: <ul style="list-style-type: none"> ⇒ Media was filled moistly → remove ⇒ Humidity from air supply → interconnect humidifier ⇒ Perspiration water caused by sharp drop in room temperature → Make sure, that there is not too much temperature fluctuation
	BNP gun adjusted incorrectly	- Adjust gun new –See 5.4.2.
(5) Static shocks	Dust collector gasket defective.	See owner manual „Dust collector „
	Defective cartridge.	See owner manual „Dust collector „
(6) No air and no media comes out the nozzle	Door interlocks are not actuated	Adjust pin resp. door fixing bzw. see 5.4.7
	Wrong connection of pneumatic	- Only when foot pedal was new installed

	hoses on foot pedal → permanent air blow off	- Connect properly
	Polluted (blocked) moisture separator.	-Clean moisture separator
(7) Air only (no media) comes out the nozzle	No blast media in the blast circuit	-Refill
	Moist media	-Remove moist media. -Remove cause for humid air supply.
(8) No interruption of blast process when foot pedal is released	Foot pedal valve blocked.	- Depressurize the installation - Replace foot pedal valve
(9) Irregular flow or too much blast media comes out the nozzle	Incorrect adjusted media flow.	Adjust new (see 5.4.1).
	Air nozzle screwed too far into the gun.	See 5.4.2

8 Admitted modifications for users

Only with the approvement of the producer! Otherwise the installation will loose garantie and CE-certification.

9 Replacement parts

9.1 Replacement parts BNP 65 and BNP 220

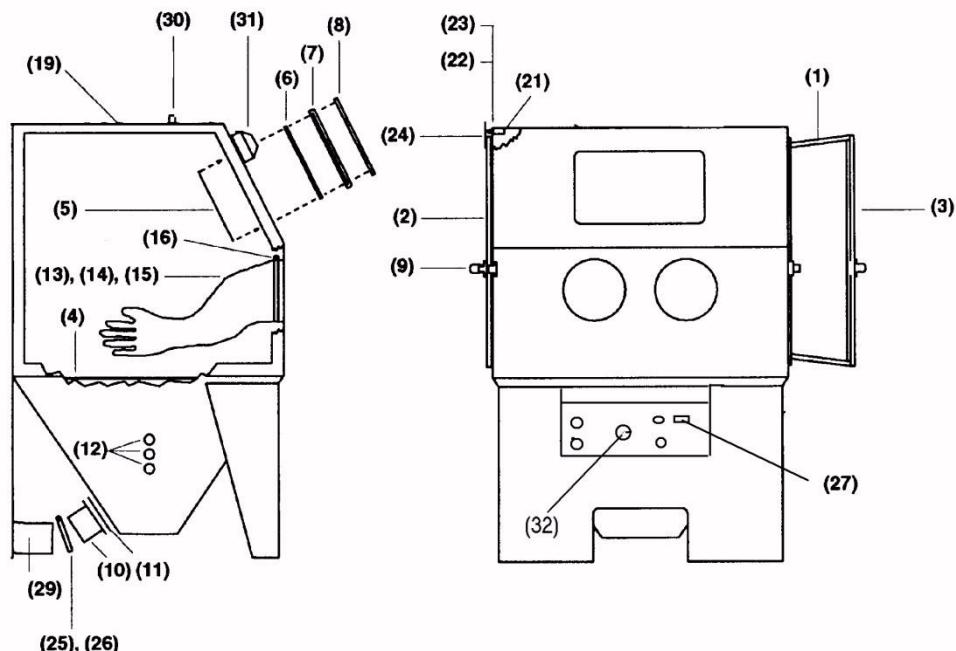

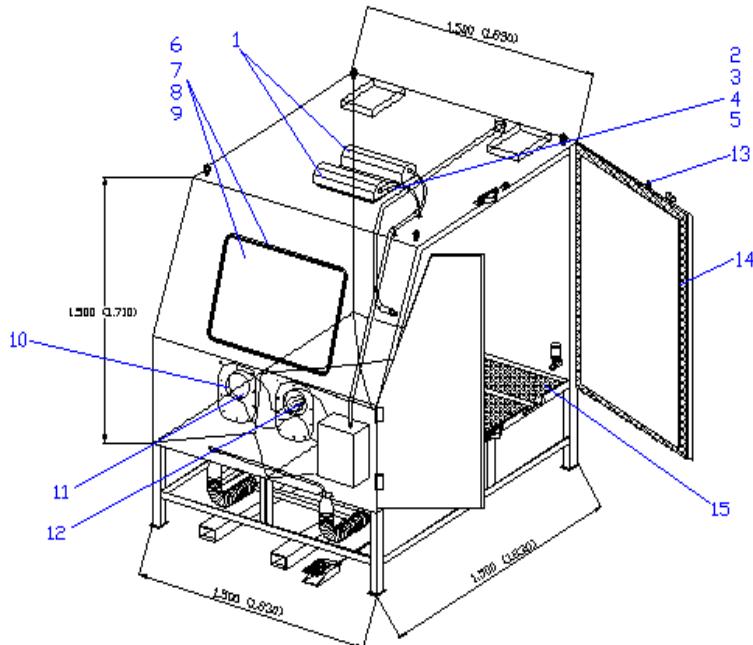

Figure 7: Replacement BNP-65, BNP-220

Pos.	Description	BNP 65 / BNP 75	BNP 85 / BNP 220
(1)	Door gasket per m	12434Z	12434Z
(2)	Left door complete	100326	100328
(3)	Right door complete	100327	100329
(4)	Gate	11811Z	11810Z
(5)	Mylar lens cabinet (5 pcs) small	06190Z	06190Z
	Change frame mylar (5 pcs)- small	100960	100960
-	Glass change frame-small	100991	100991
-	Chain /m (necessary 0,5m)	24273Z	24273Z
-	Door gasket (2m)	12434Z	12434Z
-	Star handle IG M8	100551	100551
(6)	Window glass 0583-0001 (security glass)	12212Z	12212Z
(7)	Gasket for window glass small (1,65m)	12435Z	12435Z
(8)	Filler strip for window glass small (1,65m)	12436Z	12436Z
	Tool for window mounting	12176Z	12176Z
(9)	Door opener special for cabinet	99585Z	99585Z
(10)	Adapter Ø 100 mm / 4"	12376Z	-
	Adapter Ø 125 mm / 5"	-	12377Z
(11)	Gasket Ø 100 mm / 4" for adapter	11776Z	-
	Gasket Ø 125 mm / 5" for adapter	-	11777Z
(12)	Grommet for air hose 0236-0025	11798Z	11798Z
	Rubber sleeve for 19x7	11799Z	11799Z
(13)	Rubber gloves pair	99159Z	99159Z
	Cotton gloves cabinet (pair)	100585	100585
(14)	Rubber glove, left	12710Z	12710Z
(15)	Rubber glove, right	12711Z	12711Z
(16)	Clamp (for gloves)	11576Z	11576Z
(19)	Grommet 0236-0001 (for blast hose 6 mm)	12762Z	12762Z
(21)	Bushing safety door valve	15042Z	15042Z
(23)	Pneumatic valve safety door	12202Z	12202Z
(25)	Clamp f. Ø 100 mm / 4" (wire)	90241Z	
(26)	Clamp f. Ø 125 mm / 5" (wire)		90260Z
(27)	Hour counter	100579	100579

10 Disposal

Unless a return or disposal agreement has been made, recycle the dismantled components:

- Scrap metals.
- Send plastic elements for recycling.
- Dispose of remaining components sorted according to material properties.

!	ATTENTION! Environmental damage through incorrect disposal! Electronic scrap, electronic components, lubricants and other auxiliary materials are subject to hazardous waste treatment and may only be disposed of by approved specialist companies!
---	---

The local authority or special waste disposal companies provide information on environmentally friendly disposal.
